

**Cutting ring couplings
to ISO 8434-1/DIN 2353**

Applications

Couplings to ISO 8434-1/DIN 2353

With more than **50 years experience in the manufacture of hydraulic fittings**, Legris offers a comprehensive range of high quality DIN couplings. The Legris range of products and services meets **most high pressure requirements**, combining both mobile (transport, public works, agricultural equipment) and stationary applications (automotive process, chemical industry, steel industry) enabling Legris to have high profile customers in many fields of activity.

The Legris approach to product design and manufacture incorporates **total quality control**. This policy of high quality results in product homologations that comply with international standards (DIN 3859-3) and certifications from the largest official organizations.

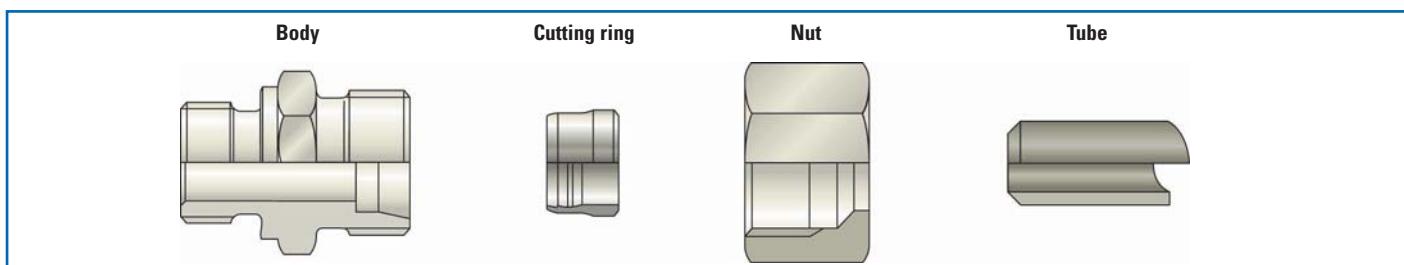

By actively listening to its customers, Legris offers solutions that meet the end users' requirements through **continuous product development and innovation**. Thus, the DiNova ring, launched in 2004, provides safe connection and long lasting sealing on installations resulting in clean equipment and safe working environments. Furthermore, the Dinova connection technology is protected by several international patents.

18

Principle

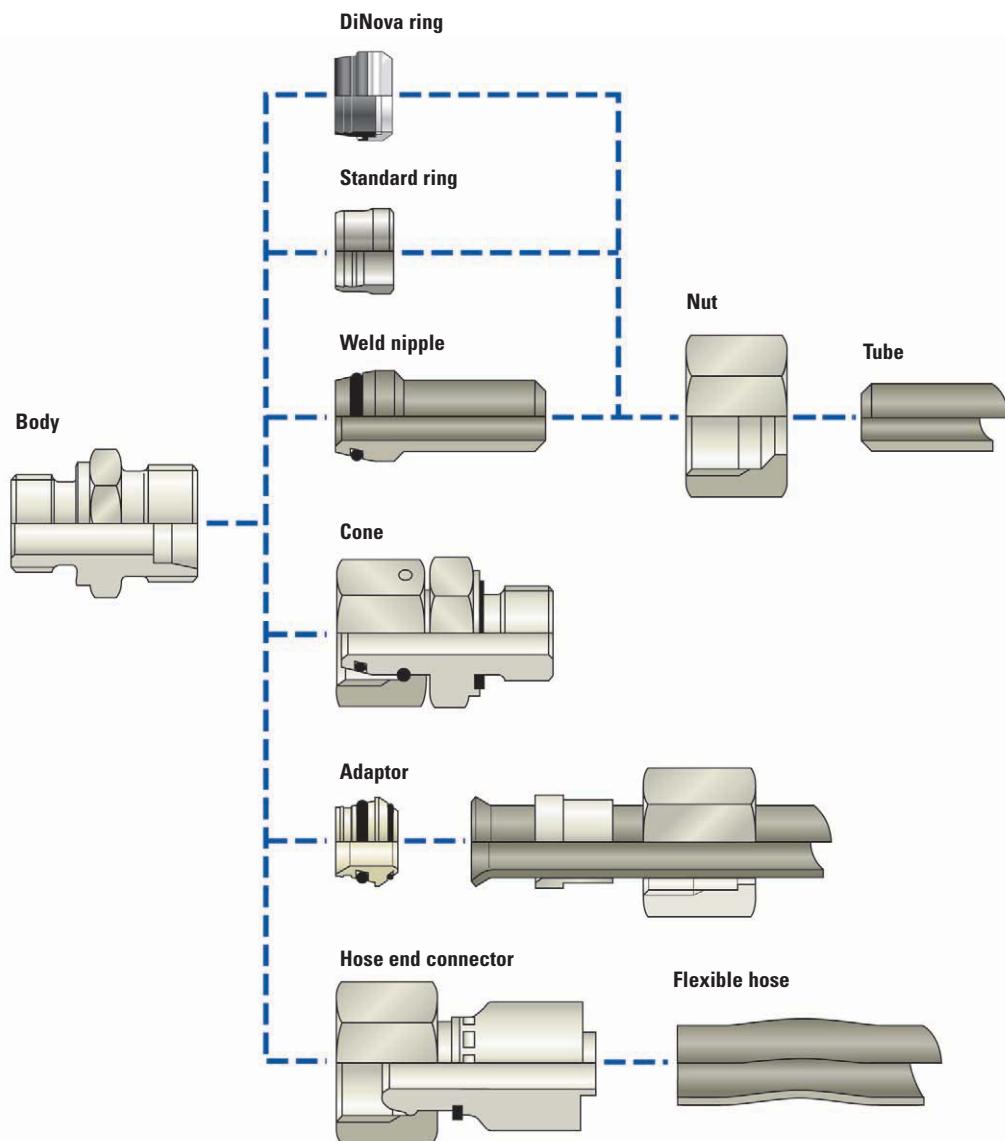

Couplings to ISO 8434-1/DIN 2353 comprise a body, a cutting ring and a tightening nut.

Principal advantages

A wide range of products offering solutions for all applications with :

- **couplings with 24° sealing cone and O-ring** : for guaranteed optimum sealing on high pressure applications, allowing simple and repetitive assembly without loss of sealing performance since, if necessary, the O-ring seal can be easily replaced.
- **couplings with assembled cutting ring** : for extreme conditions of use at high temperatures or with aggressive fluids
- **weld couplings** : for the most severe hydraulic applications (whip-lash, excessive vibration...).
- **24°/37° bulkhead couplings** : for a direct switch from cutting ring technology to 37° design.

Principal advantages

"Elbows and tees" solutions suitable for use in restricted space

- **adjustable couplings** : designed for medium and high pressures

- **adjustable couplings with lock-nut** : the best compromise for use in reduced spaces and for resistance to low and medium pressures.

- **banjos** : characterized by their compactness.

3 models depending on the working pressure and pressure loss:

- standard pressure: Pb maxi = 250 bar
- high pressure : Pb maxi = 400 bar
- full flow : low pressure drop is guaranteed

Easy installation :

the method of installing the Legris DIN range is well suited for series production (using a pre crimping machine), maintenance operations or individual unit assembly (direct manual installation).

Resistance to high nominal pressures :

DIN couplings are an optimized solution for different working pressures. 3 series of couplings (LL, L and S) are offered :

- LL for low pressures (up to 100 bar) and 4 to 12 mm o.d. tube.
Example: lubrication, braking systems.
- L for medium pressures (up to 400 bar) and 6 to 42 mm o.d. tube.
Example: machine tools, agricultural equipment.
- S for high pressures (up to 630 bar) and 6 to 38 mm o.d. tube.
Example: hydraulic presses, public works equipment

In addition, three cutting ring designs are available, offering maximum performance dependant upon the constraints of each specific installation.

Cutting rings

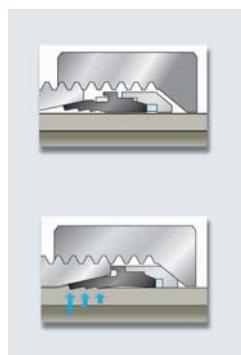

The DiNova ring

Designed to ensure total safety and long lasting sealing, the DiNova cutting ring guarantees clean equipment and safe working conditions. This solution reduces maintenance operations and is designed for all mobile and stationary applications when used with couplings series L and S.

- **Metal/metal sealing reinforced by 2 PTFE seals** : the geometry of the seal cavity prevents distortion and guarantees resistance to vibration. Protection of the seal is ensured throughout assembly - it will not compress until final crimping has been achieved (Legris patent). The PTFE seal material allows repeated assembly without any deterioration in performance over time. It is resistant to most aggressive fluids and to a wide range of temperatures (-40°C to +200°C).

- **Reliable and easy assembly** : a mechanical stop clearly indicates the crimp position and avoids the risk of insufficient tightening or over-tightening.

- **Safe connection** : three bites ensure more precise assembly and less tube distortion, thus reinforcing the safety of connection, even in extreme conditions of use. The **DiNova** ring guarantees resistance to strong vibrations, thanks to an increased area of interface with the tube upon tightening and the seal position within the assembly.

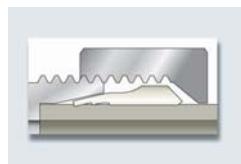

21

The double-bite cutting ring

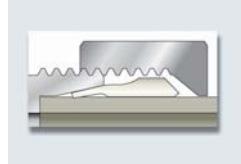

The double-bite ring constitutes an excellent solution for numerous hydraulic applications and can be used with coupling series L and S.

- **Easy assembly** and excellent **sealing** performance.
- **The geometry of the ring** prevents distortion of the tube, if overtightened.
- **Thermal treatment** guarantees resistance to vibrations and to shocks and enables repeated assembly without replacing the cutting ring.

The single-bite cutting ring

The single-bite cutting ring is suitable for coupling series LL. Its low tightening torque enables easy use and prevents distortion of the tube.

the product offer

rings, nuts

8124 single-bite **8224** double-bite **8324** DiNova **8010** nut

male stud couplings

8211 elastomer seal **8221** O-ring seal **8201** sealing bite **8205** taper

* Models ØD 6 to 10mm are manufactured from profile steel
Models ØD > 10mm are manufactured from forged steel

Couplings with 24° sealing cone and O-ring ensure high safety, particularly when strong vibration, whip-lash and temperature fluctuations may be present.

These couplings can swivel 360° and take up less space than alternate couplings. They have high sealing capability and require reduced assembly force.
They can be loosened and retightened as required.

* Recommended tightening torque for the banjo bolt

Technical characteristics

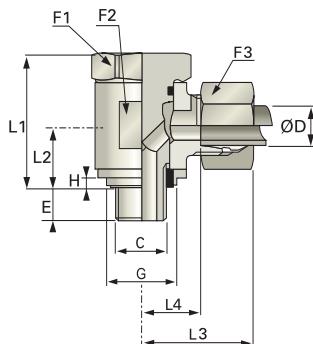

- Metal/metal sealing
- For medium pressure
- Low pressure loss
- Safety coefficient : 2.5
- Working pressure : 100 to 250 bar

90° internal passage

High pressure banjo couplings

* Recommended tightening torque for the banjo bolt

| Technical characteristics | | 45° internal passage | |
|---------------------------|---------------------|----------------------|------|
| ● PTFE seal | ● For high pressure | | 8228 |

Technical characteristics

- PTFE seal
- For high pressure
- Low pressure loss
- Safety coefficient : 2.5
- Working pressure : 250 to 400 bar

* Safety factor 1,6 mini

Technical characteristics

- Metal/metal sealing
- For low pressure
- Low pressure loss
- Safety coefficient : 1.6 minimum for series S
- Working pressure : 100 to 400 bar

90° full flow passage

High pressure double banjo couplings

* Safety factor 1,6 mini

Technical characteristics

- Metal/metal sealing
- For low pressure
- Low pressure loss
- Safety coefficient : 1.6 minimum for series S
- Working Pressure : 100 to 400 bar

90° full flow passage

Thin wall tube, generally used for low pressure, should be assembled using reinforcing rings in order to ensure reliable connection. Normally, this is also the case for nonferrous metal tubes, such as copper, brass and aluminium.

Assembly

Insert a reinforcing ring into the tube up to the knurled collar. Drive the reinforcing ring completely in by means of a hammer (plastic or hard rubber). The knurled collar is then pressed into the inner wall of the tube and secures the reinforcing ring, preventing displacement or loss.

FPM available upon request

Storage conditions

Couplings with elastomer seals must be stocked in keeping with the DIN 7716 standard. Components must be stored in a cool place –maxi temperature of 25°C-, dry and free of dust. They must also be protected from direct exposure to sunlight, intense artificial electric light and ozone.

O-rings

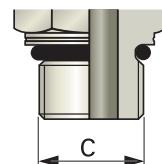

for threaded fittings

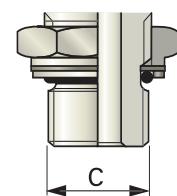

for metric thread ISO 6149-2 and ISO 261

FPM available upon request

Storage conditions

Couplings with elastomer seals must be stocked in keeping with the DIN 7716 standard. Components must be stored in a cool place –maxi temperature of 25°C-, dry and free of dust. They must also be protected from direct exposure to sunlight, intense artificial electric light and ozone..
