Advanced Pipe Systems for Industrial Fluids

ALUMINIUM RANGE

- **Calibrated Aluminium Pipe**
  Qualicoat Painting
- **Diameters (in mm)**
  16.5 - 25 - 40 - 50 - 63 - 76 - 100 - 168
- **Colours**
  Available in blue - grey - green
  Other colours upon request
- **Maximum Working Pressure**
  - 16 bar (-20°C to 45°C) up to 100 mm
  - 13 bar (-20°C to 60°C) for all diameters
  - 7 bar (-20°C to 85°C) for all diameters
- **Vacuum Level**
  99% (10 mbar absolute pressure)
- **Working Temperature**
  -20°C to 85°C
- **NBR Seals**
- **Compatibility**
  Lubricated or oil-free compressed air, industrial vacuum, nitrogen (99.99% purity), inert gas.

STAINLESS STEEL RANGE

- **Stainless Steel Pipe**
  AISI 304 or 316L
- **Diameters (in mm)**
  22 - 28 - 42 - 60 - 76 - 100
- **Maximum Working Pressure**
  - 10 bar (-20°C to 60°C) for all diameters
  - 7 bar (-20°C to 90°C) for all diameters
- **Working Temperature**
  -20°C to 90°C
- **EPDM or FKM Seals**
- **Compatibility**
  Cooling water, industrial water with additives, lubricating oil, compressed air, vacuum, inert gas.

Transair®
A Business Unit of Parker Hannifin Corporation

Parker Hannifin is the world leader in motion and control technologies, working as a partner with its customers to increase their productivity and profitability. Within Parker, Transair® is the business unit specialising in projects for industrial fluids networks.

Parker

TRANSAIR® HISTORY

1996
Creation of the Transair® pipework system 16.5, 25 and 40mm

2000
New technology for the diameter 63mm

2005
New technology for the diameters 76 & 100mm

2006
Range for cooling systems

2010
New diameter 168mm

2012
Multifluids range

2015
New diameter 50mm with SnapRing technology

2016
Stainless steel drops Ø22mm

20 YEARS CELEBRATING transair®

Transair®
The Original Modular Pipework System for Industrial Buildings

Transair®, the original modular pipework system utilising aluminium pipe and quick connectors, was launched in 1996. Since then, with more than 20 years experience, continual improvements have been made to meet the needs of compressed air, inert gas, vacuum networks and other industrial fluids. Specialising in air network projects, Transair® fits perfectly into the Parker Group's development policy and demonstrates its capacity for innovation. Transair® is perfectly adapted to the constraints and needs of all industries and is recognised for its performance, from the compressor room to the point of use, in most industrial sectors.

Transair®

The Best System for Industrial Fluids

A Technology with Multiple Assets

Transair® is the ideal solution for all compressed air, inert gas, vacuum and industrial fluid networks, by combining adaptability, quick installation, high performance and durability, while improving the profitability and reducing the related maintenance and operating costs of your networks.

Quick

- No need to weld, glue or crimp.
- Lightweight for easy handling.
- Ready-to-use.

Cost Effective

- Optimised installation, labour and operation costs.
- Sustainability of equipment and filtration devices.

Longevity

- Corrosion-free construction.
- Quality of the internal surface for a sustained cleanliness of the fluid.
- 10 year guarantee

High Performance

- Low roughness coefficient of stainless steel and aluminium pipe and full bore design.
- Optimisation of flow and pressure losses with innovative technology.

Adaptable

- Various drop solutions thanks to brackets: with swan neck or direct, with push-in technology or threaded.
- Technologies offering the best compromise between safety, efficiency and adaptability.

Transair® is Suitable for Most Business Sectors

Recognised for its performance, Transair® is installed, from the technical room to the points of use, in most industrial sectors, such as:

For All Types of Projects

Transair® is the best choice for a new installation or extension

As a specialist in industrial fluid networks, Transair® offers an innovative solution that meets the users demands, whether for the energy source, the main ring or to feed the points of use:

- High flow performance for all diameters resulting in **higher efficiency.**
- **Air quality** (ISO 8573-1 class 1.1.1) from the production to the point of use.
- **Secured connection** regardless of the environment (compressor room, outdoor...).
- Lightweight and compact products to improve **working conditions** and provide **easy installation**.
- Quick and easy installation for easier maintenance and **reduced downtime**.
- Dismountable system and reusable products for **low depreciation** on capital.

Transair® is the best choice to retrofit old networks

Transair® is the economical, reliable and efficient alternative to traditional steel networks. Change old steel pipe network for Transair® to optimise your operation costs and to benefit from high impacts on your productivity:

- Lower roughness and larger inner diameter: **maximum flow 20% higher** than with steel pipe, **energy savings** in compressor.
- Corrosion free: **reducing the costs** of changing filter elements.
- Constant air quality for **reduction of maintenance costs** for machines and equipment.

Transair®

The Largest Offer of Tools and Services

The Transair® offer combines a wide range of tools and services to support every step of a project for industrial fluid networks: design, estimation, delivery, installation.

DESIGN

Sizing tools to select the right diameter:
- **Transair® Flow Calculator** for compressed air and inert gas networks.
- **Transair® Vacuum Calculator** for vacuum networks.

Transair® CAD Drawings
Transair® core products available in more than 60 CAD formats, 2D or 3D, neutral or native.

Special Products

For specific needs, we can develop tailor-made products. All these products are tested according to the same quality procedures as the standard products.

ESTIMATION

Calculation Tools for a Budget

3 tools available online to calculate the budget of a Transair® network according to the project status:
- **Pre-quote tool** to estimate the necessary budget in a few seconds.
- **Quote tool** to determine the most accurate bill of material and associated budget.
- **Transair® Energy Efficiency Calculator** evaluates the return on investment of a Transair® solution compared to a traditional steel network, for compressed air network projects - new or replacement.

Transair® Quotation Service

A dedicated team to support complex Transair® projects, including technical studies, estimations of installation times, detailed bill of material and related weight/ volume.

Available by e-mail at transair.quotation@parker.com

DELIVERY

GeoLoc: The Geolocation Service proposed by Transair®

- **Transair® real-time delivery tracking service** from the shipping site to the work site.
- **Built-in GSM beacon** for on-site direct deliveries.
- **Localisation of deliveries** throughout the shipment, with sending of programmable alerts.
- **Optimised organisation** of work sites.

Logistics Expertise

Logistical conditions adapted to the customers'expectations:
- **Tailor-made packaging** to facilitate material handling and storage.
- **Delivery** at required date for optimisation of handling resources.
- **Shipment scheduling** to streamline the organisation of building sites.

INSTALLATION

An installation kit is available for each project take off, including:
- **A pocket guide** to answer most questions about installation rules, together with the associated poster
- **A poster** of the main dimensions of the Transair® products to calculate the length of pipes required
- **Recommendations for the commissioning** of a compressed air network
- **A poster featuring the core products** to facilitate restocking

If necessary, our teams and partners are available to accompany you at any time on a construction site.

Transair® The Quality Benchmark

PRODUCTS

Product Quality

All Transair® products are tested and controlled at every stage of the production process to ensure maximum efficiency for the user. Our products have to succeed a series of drastic tests: static and dynamic leak tests, burst pressure, cycled pressure and accelerated ageing tests.

Product Traceability

Transair® tracks each production batch at any stage of its manufacturing process. All products are marked individually for an optimum follow-up (batch number and barcode on packaging). The origin of the products and the material certificates are available upon request.

STANDARD AND REGULATION UNIVERSE

Quality System

ISO Certification
Parker Hannifin is certified ISO 9001 version 2008 and ISO TS 16949 version 2009.
ISO TS, based on Automotive Industry standards, is one of the most demanding.

Requirements Related to Pressure Equipment

ASME B31.1 / B31.3 and TSSA
The Transair® products meet the requirements of ASME B31.1 and of ASME B31.3.
The Transair® products are approved by the Technical Standards & Safety Authority (TSSA) and registered under the Canadian Registration Number (CRN).

CE
The Transair® products conform the European Pressure Equipment Directive 2014/68/EU. The aims of Directive 2014/68/EU are to maintain a sufficient level of safety in the tanks, generators and piping.

TÜV Certification
TÜV Rheinland certifies that Transair® products fulfill regulatory requirements for pipes under pressure according to the German AD-2000 Merkblatt technical rules and to the European Pressure Equipment Directive 2014/68/EU (DESP).

Environment

ISO 14001
Parker Hannifin is certified ISO 9001 for its Environmental Management System, which requires to reduce the impact on the environment when manufacturing a product and launching it on the market.

REACH - RoHS
All Transair® products are in compliance with the REACH and RoHS directives which limit the use of hazardous substances.

Eco Design
When launching a new product, an Eco-design best practice and a life-cycle analysis are carried out to reduce the long term impact on the environment.

Quality of the Fluids

ISO 8573 Certification
This international standard establishes the different quality classes in compressed air. Transair® has been successfully tested to reach the highest expectation of this standard. Transair® products will not contaminate the conveyed fluid with solid particles, water, moisture or oil.

Oil Free Certificate
Transair® products will not contaminate the conveyed fluid with grease or oil particles.

Silicone Free Certificate
Transair® products are guaranteed silicone-free, which is mandatory for premium air purity.
No need to add complementary filters which increase pressure drop.

Labs Free Compliance
Transair® products can meet with the demanding cleanliness requirements defined by the user, especially for paint and clean rooms applications.

Safety

Euroclasses EN 13501-1 & UL94 Certificate
All Transair® core products are non-flammable with no propagation of flame.

ATEX Directive: 2014/34/EU
This directive is mandatory for electrical and non-electrical equipment used in explosive, gaseous or dusty atmospheres. The use of Transair® products is possible according to the ATEX zoning defined by the user.

Long Term Commitment

10 Year Guarantee
Transair® products that are guaranteed for a period of 10 years against any defect from the date of the installation.

TECHNICAL SPECIFICATIONS

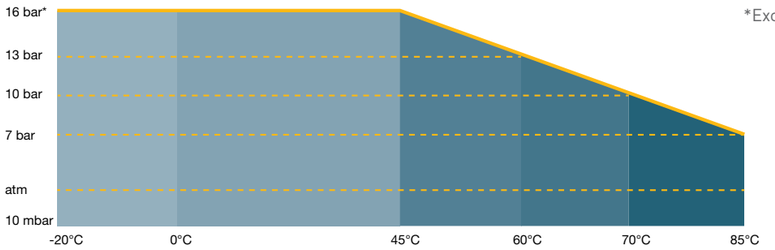

Transair® Main Features

Applications

Transair® is adapted for compressed air applications (dry, lubricated or with water condensation), for inert gas applications like nitrogen, argon or CO_2 (for purity up to 99.99%) and for vacuum applications (performance and compatibility described page 19 of this catalogue).

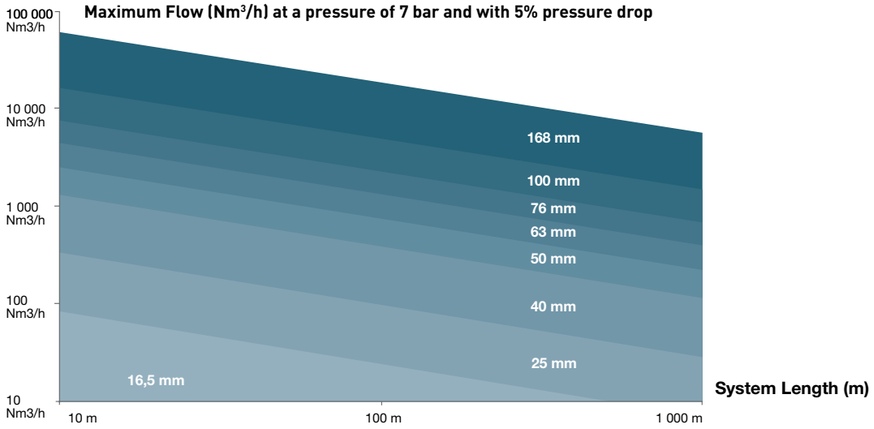

Working Pressure and Temperature

The maximum working pressure of Transair® system, versus operating temperature, is according to the diagram below.

*Except 168 mm: maximum 13 bar

Maximum Flow

Sizing

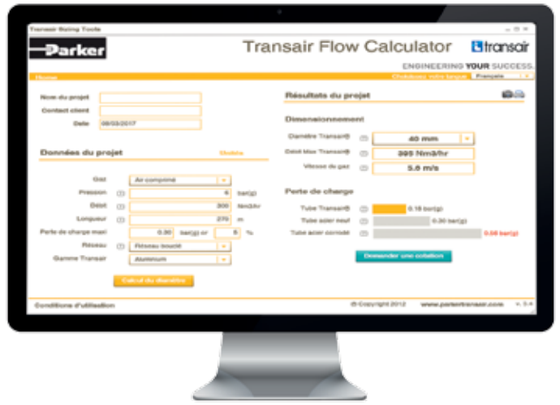

Sizing a Network

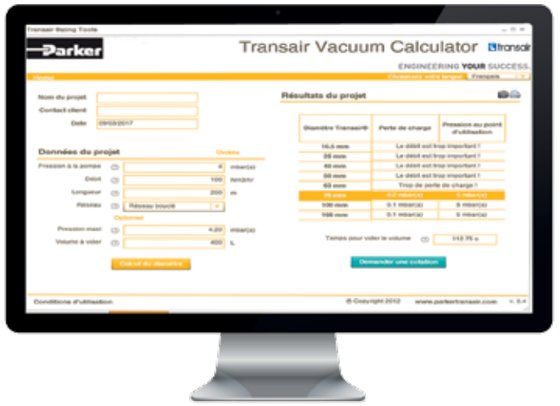

Select the Transair® diameter for your application based on required flow and length.Estimated values for a closed loop network, a pressure of 8 bar with 5% pressure drop.Velocity is not taken into account.

Flow			Length										Compressor (kw)
			164ft	328ft	492ft	984ft	1640ft	2460ft	3280ft	4265ft	5249ft	6561ft

TRANSAIR® SIZING TOOLS

Transair® Flow Calculator (TFC) and Transair® Vacuum Calculator (TVC)

TFC and TVC sizing tools are simple, quick and easy to use.

When entering:

- the flow of the compressor or pump
- the length of the main ring (closed loop yes/no)
- the working pressure

Your network is immediately sized with the most suitable Transair® diameter for your project.

The calculation includes an estimation of pressure losses and, in the case of a compressed air or inert gas network, a recommendation of maximum flow.

These tools are available at www.parkertransair.com:

www.parkertransair.com/TFC
www.parkertransair.com/TVC
or upon request to transair@parker.com

Very easy to use:

These tools allow to obtain in just 3 steps the most appropriate Transair® pipe diameter for your network.

Both TFC and TVC include all diameters of Transair® aluminium range: 16.5 - 25 - 40 - 50 - 63 - 76 - 100 and 168mm.

- Possibility to size the diameters for compressed air, inert gases, nitrogen, dry CO_2 and vacuum networks.
- Intuitive tool with help tips at each step
- For compressed air and inert gases, comparison of results with a traditional steel network
- Possibility to print the outcome report

TRANSAIR® PAYBACK TOOL

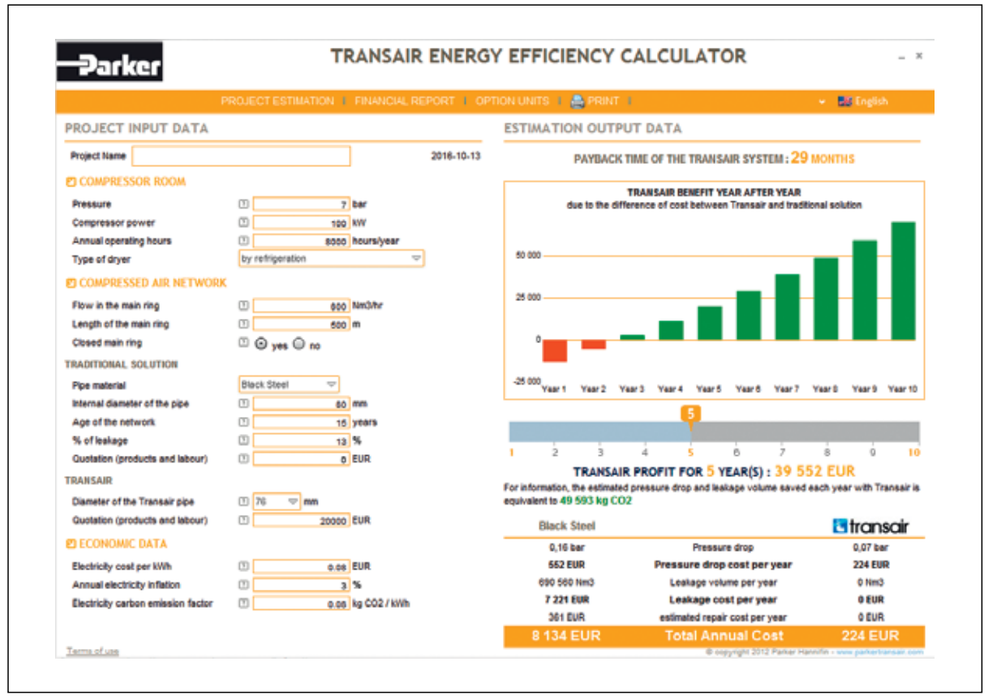

Transair® Energy Efficiency Calculator (TEEC)

Energy Efficiency with Transair®

The Transair® Energy Efficiency Calculator software determines the savings and the ROI (Return On Investment) timeframe using compressor data (pressure, power, annual service hours, type of dryer), plus data from the network (length of the main ring, type of open or closed loop, pipe material used) and the local cost of electricity, including an inflation factor.

The results demonstrate that Transair® is the most efficient solution and the best option in the long term.

Whether you are extending or renovating an existing system or installing a new one, you can contribute to your company's performance and help to protect the environment by choosing Transair®.

This tool is available at www.parkertransair.com:

www.parkertransair.com/TEEC
or upon request to transair@parker.com

TRANSAIR® STANDARDS AND CERTIFICATIONS

Transair® aluminium range certifications fall within the standards and regulations universe described on pages 8 and 9 of this catalogue.

Standards Related to Transair® Aluminium Pipe

Qualicoat Label

Transair® aluminium piping system complies with the QUALICOAT label, which guarantees the quality of the painting process, the chemicals used, the finished quality and the coating resistance of the aluminium pipe.

Material Certificate

Transair® aluminium piping system complies with EN 755.2, EN 755.8, EN 573.3 standards, which define mechanical and chemical properties of pipes. The quality and consistency of the aluminium alloy used allow to bend Transair® aluminium pipe as described on page 110 of this catalogue.

Applications

Air Quality - ISO 8573 Certification: 2001 & 2010 Classes 1.1.1

Transair® aluminium range conforms to ISO 8573: 2001 & 2010 Classes 1.1.1 certification.
ISO 8573 certification establishes the different quality classes of compressed air for the 3 main components present in any compressed air system: dust, water and grease.
Transair® aluminium range has been successfully tested to reach the highest expectation of this standard.
A Transair® distribution network guarantees a constant quality of the conveyed fluids, from the production point to the point of use.

ISO 8573-1:2010 Class	Solid Particulate				Water		Oil
	Maximum number of particles per m^3			Mass Concentration mg/ m^3	Vapour Pressure Dewpoint	Liquid g/m^3	Total Oil (aerosol liquid and vapour)
	0.1 – 0.5 µm	0.5 – 1 µm	1 – 5 µm				mg/ m^3
0	As specified by the equipment user or supplier and more stringent than Class 1

X	-	-	-	OK	-	OK	OK

* : Transair® in line with standard after 1 purge

** : Transair® in line with standard depending on the atmospheric conditions

Vacuum

Transair® aluminium range can be used for vacuum applications down to 10 mbar absolute pressure.

Compatibility with Non Flammable Gases

Transair® aluminium range is suitable for distribution of non flammable gases such as: Argon, Nitrogen, Carbon Dioxyde and mix of these gases. Based on laboratory purity testing, Transair® (fitting and aluminium piping) is compatible with 99.99% purity Nitrogen applications.

Gas	Compatibility with Transair®
Nitrogen (N_2)	Compatible
Argon	Compatible
Carbon Dioxyde (CO_2)	Compatible
Helium (He_2)	Compatible
Mix Argon (Ar_2) + Carbon Dioxyde ($CO_{2)}$	All ratios
Oxygen (O_2)	Up to 22%
Hydrogen (H_2)	Up to 4%

Transair® aluminium range is compatible with transportation of above gas, according to all recommendations of uses of Transair® piping system, provided the conveyed fluid is dry (no condensation in the Transair® piping system).

Safety

Euroclasses EN 13501-1 Certification

Transair® aluminium range is classified B s2 d0 according to EN 13501-1.
EN 13501-1 certification describes the different classes of reaction to fire for the 3 main criteria as follows: energy contribution to the propagation of fire, smoke production and flaming particles.

Energy Contribution to the Propagation of a Fire			Smoke Production		Falling Drops	
B	Contribution limited to fire propagation	Resistant to prolonged attack flames and ardent isolated object while limiting the spread of flame.	s2	Average smoke production	d0	no drops, no flaming particles

Transair® Blowgun

Transair® blowgun EA59 00 13 complies with regulations OSHA 1910.242 (b) for hand and portable powered tools, OSHA 1910.95 (b), Directive 2003/10/EC.

The above mentioned certificates are available upon request.

TRANSAIR® FOR INDUSTRIAL VACUUM

Transair® system is particularly suited for vacuum applications:

- Diameters up to 168mm to meet all requirements
- Full flow connection for a better aspiration
- Big diameters for a maximum flow on the machine connections
- Optimum sealing to guarantee the proper functioning of the machines
- Different colours of pipe for easy network identification
- Sizing tool to ease the project study (TVC)

Certificates :
- Vacuum Performance, 10 mbar in absolute pressure
- Air Quality ISO 8573: 2001 & 2010 Class 1.1.1

OPTIMISED PRODUCTS FOR INDUSTRIAL VACUUM APPLICATIONS:

6615
Male Stud Fitting with Fixing Plate Full bore connection to machines for optimised flow

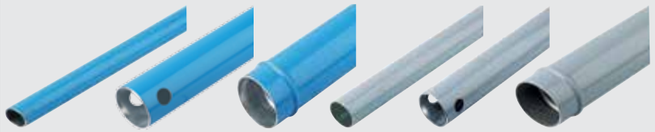

6612
45° Equal Elbow To limit pressure losses

RA69
Quick Assembly Bracket

RR61
Simple Bracket Female BSP Parallel

1003 - 1006 - Blue or grey aluminium pipe for a better network identification

TRANSAIR® FOR INERT GASES

Transair® advantages for inert gases applications:

- Transair® materials allow to maintain the quality of the conveyed gases.
- Optimum sealing of Transair® connectors allow to maintain gases purity.
- 3 port threaded wall bracket to be used with column flowmeters
- Different colours of pipe for easy network identification
- Sizing tool for inert gases (TFC)

Certificates:
- Suited for applications with: nitrogen, argon, CO_2 and their mix (exhaustive list upon request)
- 99,99 % purity with nitrogen (100 ppm oxygen)
- Air Quality ISO 8573: 2001 & 2010 Class 1.1.1

OPTIMISED PRODUCTS FOR INERT GASES APPLICATIONS:

6637
Wall Bracket

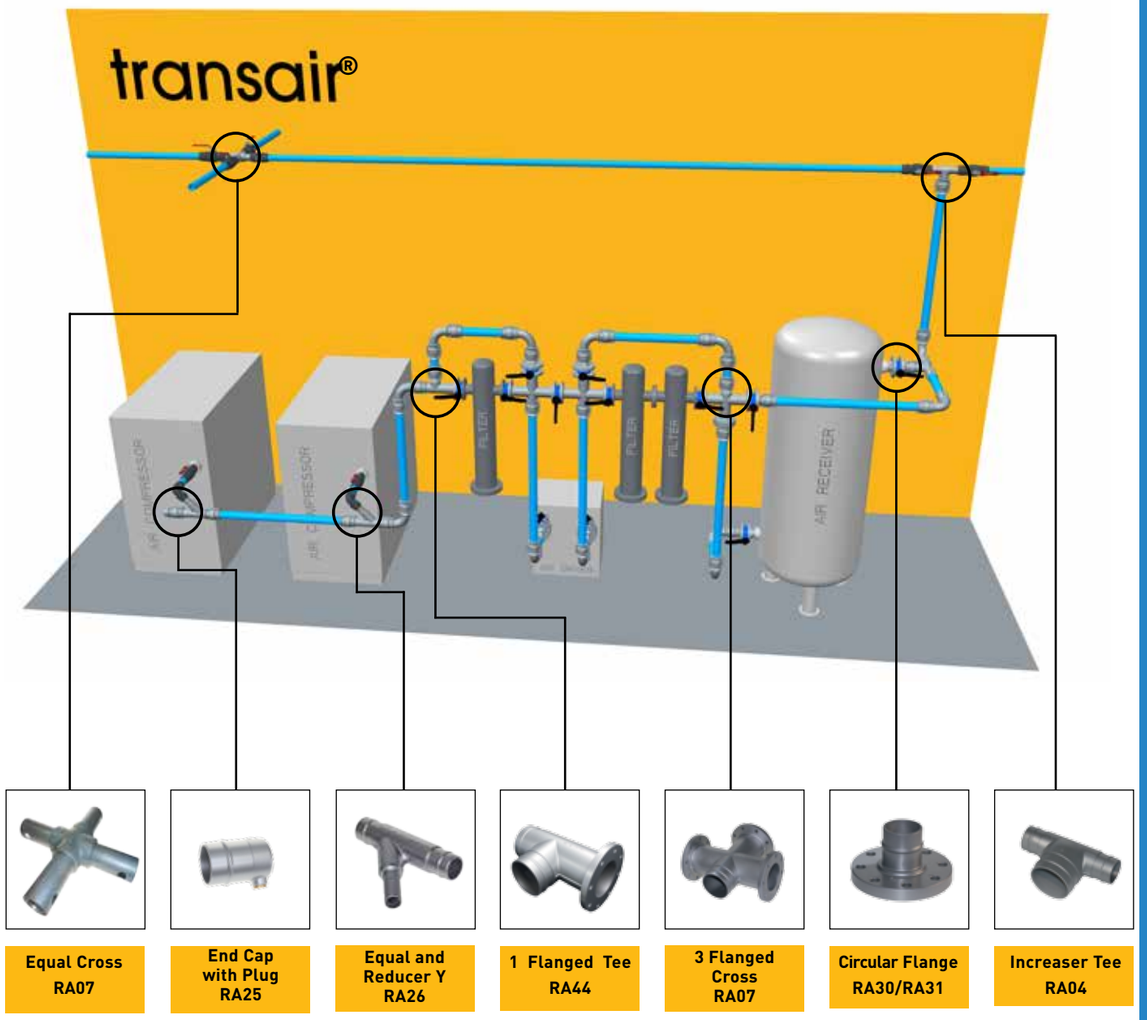

RA69
Quick Assembly Bracket for a better flow

1006
Green Aluminium Pipe for a better network identification

ALL SEALS ARE IN NBR (unless otherwise stated)

- **Adaptator:** brass
- **Fixture accessories:** galvanized steel - brass
- **Composite coupler:**
  - Body: polymer HR / Zamac
  - Sleeve: polymer HR
  - Spring and ball: stainless steel
  - Seal: nitrile
- **Metal coupler:**
  - Body: duralumin anodisé
  - Sleeve: treated nickel-plated steel
  - Spring: stainless steel
  - Seal: nitrile
  - Probe: treated brass, treated steel
- **Hose reel :**
  - Case: plastic
  - Fixing: metal
- **Blowgun:**
  Reinforced polyamid - treated aluminium - insert: brass
- **Connection accessories:** nickel-plated brass
- **Anti-whip lash strap:** steel

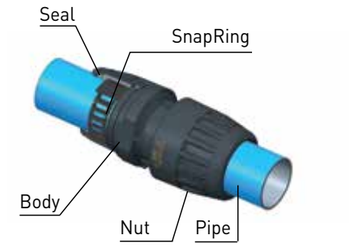

TRANSAIR® CONNECTION TECHNOLOGIES

Transair® innovative technology takes into account the specific requirements of each diameter and provides the user with an optimum safety coefficient and easy connection.

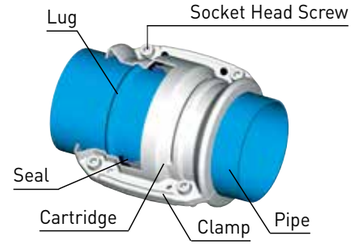

Ø16.5 - Ø25 - Ø40 mm

Simply push the pipe into the connector up to the connection mark.
The gripping ring of each fitting is then automatically secured and the connection is safe.

Ø50 - Ø63 mm

Transair®'s SnapRing secures the connection between the nut and the pipe - tightening of the nuts secures the final assembly

Ø76 - Ø100 - Ø168 mm

Position the pipes to be connected within the Transair® cartridge and close/tighten the Transair® clamp.

Reliable and Safe Connection Technologies

Because users need versatile but reliable and safe solutions, Transair® has developed different technologies for the best compromise between safety, efficiency and adaptability.

- **Gripping ring instant connection** for diameters 16.5, 25 and 40mm offers the maximum flexibility.
- **SnapRing quick-fit connection** for diameters 50 and 63mm proposes the most secure technology while maintaining ease of handling: no possible errors during installation.
- **Lug & Clamp quick-fit connection** for diameters 76, 100 and 168mm avoids any disconnection: the internal cartridge works as a fuse if a failure in the network causes an excessive pressure increase.

	Mechanical Stress due to Pressure	Frequency of Modifications	Transair® Technology
Ø 16.5, 25 & 40 mm	+ (up to 250 kg)	+++++ (every quarter)	Gripping Ring Instant Connection
Ø 50 & 63 mm	++ (up to 600 kg)	+++ (every year)	SnapRing Quick-fit Connection
Ø 76, 100 & 168 mm	+++++ (up to 3000 kg)	+ (every 3 years)	Lug & Clamp Quick-fit Connection

RIGID ALUMINIUM PIPE

- Clean air ISO 8573: 2001 & 2010 Class 1.1.1.
- Optimum flow rate performance
- Lightweight
- QUALICOAT certified surface finish
- 3 colours: blue (RAL 5012/BS1710), grey (RAL 7001), green (RAL 6029) (others: please consult us)
- Extruded pipe, conforms to EN 755.2, EN 755.8 and EN 573.3

FIXING CLIPS FOR RIGID ALUMINIUM PIPE

- Easy adaptation for all pipework configurations
- For suspension of pipes, from walls, partitions, beams, cable trays, Canalis electrical installations, etc, vertically or horizontally
- Perfectly adapted for use with Transair® networks

Ø 16.5 25 40

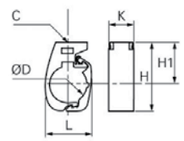

FIXING CLIP FOR RIGID ALUMINIUM PIPE

Transair®	ØD	C	H1	H	K	L	Kg
6697 17 00	16.5	M8 x 1.25	46	61	30	33	0.027
6697 25 00	25	M8 x 1.25	46	67	30	38	0.030
6697 40 00	40	M8 x 1.25	46	74	30	50	0.035

To ensure good stability of the network, we recommend the use of at least 2 clips per pipe.
Use only this clip for fixing Transair® rigid pipe, all other types of clip are to be avoided.

Ø 50 63

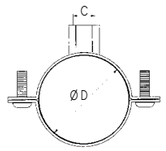

FIXING CLIP FOR RIGID ALUMINIUM PIPE

Transair®	ØD	C	H1	H	K	L	Kg
6697 50 00	50	M10 x 1.5	90	122	30	61	0.068
6697 63 00	63	M10 x 1.5	90	127.5	30	73.5	0.073

To ensure good stability of the network, we recommend the use of at least 2 clips per pipe.
Use only this clip for fixing Transair® rigid aluminium pipe, all other types of clip are to be avoided.

Ø 76 100 168

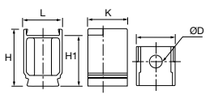

FIXING COLLAR FOR RIGID ALUMINIUM PIPE

Transair®	ØD	C	Kg
ER01 L1 00	76	M8 / M10	0.168
ER01 L3 00	100	M8 / M10	0.259
ER01 L8 00	168	M8 / M10	0.540

To ensure good stability of the network, we recommend the use of at least 2 collars per pipe.

Ø 16.5 25 40

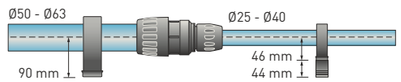

SPACER

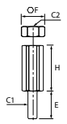

Transair®	ØD	H	H1	K	L	Kg
6697 00 03	11	49.5	44	34	33	0.021

This spacer, in association with a Transair® pipe clip, allows consistent alignment of pipes when different diameters of pipe are run concurrently in the same line.

Ø 16.5 25 40

CLIP ADAPTOR FOR THREADED ROD

Transair®	C1	C2	E	F	H	Kg
6697 00 02	M8 x 1.25	M10 x 1.5	16	16	22	0.056

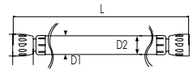

The use of this adaptor facilitates the suspension of Transair® M10 threaded rod.

FLEXIBLE HOSES

- Compressor outlets (absorption of vibration)
- To bypass obstacles and join different levels
- Expansion loops
- Max. working pressure for flexible hose used for compressed air:
  - 13 bar from -20°C to +60°C
  - 16 bar from -20°C to +45°C
- Working temperature: -20°C to +60°C
- Resistant to mineral and synthetic compressor oils
- Fire resistant (conforms to ISO 8030 standard for compressed air flexible hose
- Flexible hose for vacuum: please consult us

Anti whip-lash strap

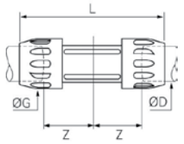

Prevents whip-lash should Transair® flexible hose be disconnected whilst under pressure.
Conforms to ISO 4414 safety standard.
Anti whip-lash strap includes 2 cables and 4 tensioning points.
6698 99 03 for Ø 25-40-50-63-76-100
6698 09 07 for Ø 168 only

PIPE-TO-PIPE AND STUD CONNECTORS

- Quick connection
- Full bore design: consistent inner diameter for both pipe and connectors
- Interchangeable (applicable to Ø16.5, Ø25 and Ø40) and reusable
- Non-flammable materials (UL94-HB standard)

BALL VALVES AND BUTTERFLY VALVES

Transair® ball valves and butterfly valves placed regularly throughout the network and at key locations, such as compressor outlets and upstream of pneumatic tools, allow ease of system isolation and pipe work reconfiguration / maintenance.
- Quick connection
- These valves are silicone-free.

MINI BALL VALVE - MALE / FEMALE, BSP TAPER

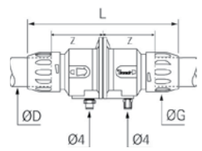

Transair®	C	DN	F	H	L	M	Kg
4981 10 21TR	R1/2	10	25	31	46	20.5	0.138

Max. working pressure: 10 bar

Ø
40

REMOTE CONTROL SHUT-OFF VALVE

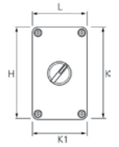

Transair®	ØD	G	L	Z	Kg
4230 00 40	40	67	261	85	1.817

Min. working pressure: 4 bar - Max. working pressure: 13 bar
The Transair® remote control shutt-off valve is supplied with a plugged vent hole. This allows venting of the downstream network, after closing the valve.

PILOT KIT

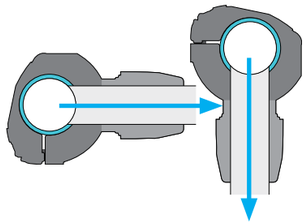

Transair®	H	K	K1	L	Kg
4299 03 01	145	106	70	82	0.788

This pilot kit comprises: pneumatic ON-OFF switch (maximum 10 bar operating pressure), twin 4 mm OD polyurethane tube (length 10m) and plastic box.

QUICK ASSEMBLY DIRECT FEED BRACKETS

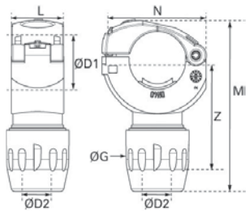

For rigid drops with horizontal take off or for all types of air supply with rigid pipe or flexible hose on an installation which incorporates an efficient air dryer.

- Optimum flow
- Compact
- Well adapted for most OEM applications and for use with neutral gases
- Quick installation without any cutting of pipe

QUICK ASSEMBLY BRACKETS

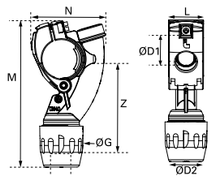

New generation quick assembly brackets are recommended for vertical or horizontal take-offs, using either rigid pipe or flexible hose.

- Integral water retention device
- Very high flow
- Quick installation without any cutting of pipe

PRESSURISED SYSTEM OUTLETS

- Ideal for fast assembly of new pressurised outlets, without venting the compressed air network.
- The drilling tool can be used with most standard drills.
  We recommend, however, that the pipe work network is drained prior to the addition of an outlet.
  Thanks to the lateral dismantling capability of Transair® pipe and the use of quick assembly brackets, this operation can be completed very quickly (less than 7 min. for a new outlet) and guarantees the interior cleanliness of the circuit.

Thanks to its unique design, EW09 00 22 drilling tool may be used to carefully drill pipes without use of jig 6698 02 01.
Both tools can be used on any type of drilling machine, without the drilling jig, at a maximum rotation speed of 450 tr/min for the aluminium pipes.
After drilling, it is necessary to deburr and clean the pipe.

FRL, AUTOMATIC DRAINS AND ACCESSORIES

Transair® FRLs are ideal for general purpose use and can be fitted downstream of the compressed air installation and at the take-off point on workstations and machines.

- Air quality at FRL inlet: dry, damp, lubricated
- Transair® FRL products are guaranteed silicone free
- Chemical resistance to compressor oils

HOSE REELS – BLOWGUN - RECOIL TUBING

Hose reels
- Optimise productivity and the safety of your work area
- Prevent hose damage occurring on the workshop floor

Polyurethane Recoil Tubing
- Perfectly suited to installations requiring flexibility in a reduced space
- Fluid: compressed air
- Max. working pressure at 20°C: 10 bar
- Working temperature: -15°C to +70°C

Blowgun
- Dusting, cooling and drying components
- Removing swarf, Cleaning machinery
- Max. working pressure: 10 bar
- Working temperature: -15°C to +50°C
- OSHA certified

Supplied with captive sealing washer.
Ideally suited for use with Transair® PVC hose.

COMPOSITE AUTOMATIC SAFETY COUPLERS

- To securely connect and disconnect devices and tools from Transair® quick assembly brackets or wall brackets
- Very high flow, extremely low pressure loss
- Lightweight and robust
- Improved hand grip
- Fast vent time
- Male thread with integral seal

For heavy duty or dusty applications, we recommend the use of the automatic metal couplers (pages 60/61).

FLOW CURVES - PRESSURE LOSS

Transair® composite automatic couplers disconnect by a double twist of the sleeve – a safety feature that breaks deliberately with common practice in order to avoid accidental disconnection.

- 100% safety - ISO 4414

1st rotation in direction of the arrow : circuit rapidly flushed out, probe side.

2nd rotation in direction of the arrow : safe disconnection of body and probe.

THE GOLDEN RULES OF INSTALLATION

Installation Instructions

General

Prior to the installation of a Transair® compressed air distribution system, plan to install an adequate air filtration and drying system. Flexible Transair® hose can be installed at the start of the system in order to eliminate any sources of vibration and to facilitate maintenance operations.
When maintaining or modifying a Transair® system, the relevant section should be vented prior to the commencement of any work.
Installers should only use Transair® components and accessories, in particular Transair® pipe clips and fixture clamps.
The technical properties of the Transair® components, as described in the Transair® catalogue, must be respected.

Commissioning the Installation

Once the Transair® installation has been installed and prior to commissioning, the installer should complete all tests, inspections and compliance checks as stated in any contract and according to sound engineering practice and current local regulations. Final commissioning instructions are described on page 111 of this catalogue.

Transair® Pipe and Hoses

Transair® pipe should be protected from mechanical impact, particularly if exposed to potential collision with fork-lift trucks or when sited in an environment with moving overhead loads.
Similarly, rotation of the pipe and pipe supports should be avoided.
Transair® pipe must not be welded.
Flexible Transair® hoses should be used in accordance with the recommendations of the installation guidelines of this catalogue (pages 93 to 97).
NB: for bending a Transair® aluminium pipe, please refer to page 110 of this catalogue.

Expansion / Contraction

Expansion and contraction of the system are automatically catered for by correct installation. The system designer and installer should calculate the expansion or contraction of each Transair® line according to the recommendations in this installation guide.

Component Assembly

Transair® components are provided with assembly instructions for their correct use - simply follow the methods and recommendations stated in this document.

Transair® Installations - Prohibited Situations

- Installation within a solid mass (concrete,foam, etc.), especially underground
- The hanging of any external equipment on Transair® pipe
- The use of Transair® for earthing or as a support for electrical equipment
- Exposure to chemicals that are incompatible with Transair® components (please contact us for further details)
- The use of components not approved by Transair®

Best Practices

When installing a Transair® system, the work should be performed in accordance with good engineering practices.

- **Bends and bypasses represent sources of pressure drop.**
- **To avoid excessive pressure loss, use modular consoles to offset the network and to bypass obstacles.**
- **Keep in-line pipe diameter reductions to a minimum.**

Maintain a consistent level of good quality air by use of adequate filtration at the compressor outlet.

- **The diameter of the pipe will influence pressure drop and the operation of point-of-use equipment.**
- **Select the diameter according to the required flow rate and acceptable pressure drop at the points of use.**

Never encase the network in order to facilitate maintenance or servicing.

- **Position drops as close as possible to the point of use.**

TRANSAIR® ALUMINIUM PIPE

Ø 100

PIPE LUGGED AT EACH END, DEBURRED AND CHAMFERED

Ø 168

PIPE LUGGED AT EACH END, DEBURRED AND CHAMFERED

Transair® aluminium pipe is supplied "ready for use".
No particular preparation (cutting, deburring, chamfering, etc.) is required.
Thanks to the rigidity of Transair® aluminium pipe, temperature-related expansion / contraction phenomena are reduced to a minimum. The Transair® network retains its straightness, and hence its performance, over time (reduction of pressure drop caused by surface friction).
Transair® aluminium pipe is calibrated and fits perfectly with all Transair® components. Each connection is automatically secured and the seal is optimized.
The use of Transair® aluminium pipe minimises corrosion to the internal surface (self-protection of the pipe by the formation of alumina oxide).

Transair® aluminium pipe has a protective lacquer coating (QUALICOAT certified) and is thus protected from external aggression.
Its colour allows the network to be immediately identified and gives a clean and aesthetic overall appearance.
Standard colours available:
- blue (RAL 5012/BS1710)
- grey (RAL 7001)
- green (RAL 6029)

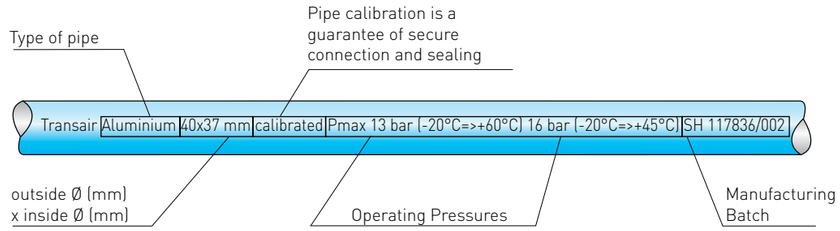

(please contact us for other colours)

Transair® aluminium pipe is available in 8 diameters and 2 lengths: 3 metres and 6 metres (4.5 metres for Ø16.5 - please contact us for other lengths).

APPLICATIONS

Transair® Ø16.5 - Ø25 - Ø40 - Ø50 - Ø63 - Ø76 - Ø100 - Ø168 aluminium pipe has been specially designed for the creation of primary and secondary networks for compressed air, vacuum and inert gases (argon, nitrogen, CO_2) - please contact us for other fluids

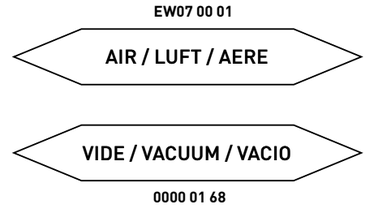

MARKING

IDENTIFICATION

The conveyed fluid can be instantly identifed by the colour of the pipe.
Example :
Blue Pipe → Compressed Air Network
Grey Pipe → Vacuum Network
Green Pipe → Nitrogen

This identification may also be done by applying adhesive labels directly onto the pipe.

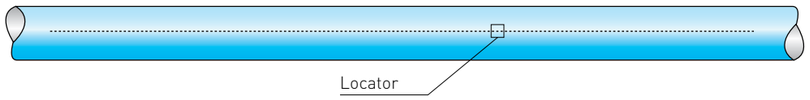

CONNECTION INDICATOR

ONLY ON Ø 16.5 - Ø 25 - Ø 40 ALUMINIUM PIPE

DRILLING LOCATOR : "MARK" LINES FOR CORRECT DRILLING

Drilling locator is used to correctly position Transair brackets onto the pipe.
There are two locators on each pipe.
The second locator is used to position extra brackets perpendicular to eachother.

PROCEDURE

1 - Cutting the pipe :
- place the pipe in the pipe cutter
- position the blade on the pipe
- rotate the pipe cutter around the pipe while gently tightening the wheel.

2 – Carefully deburr and chamfer the outer and inner edges of the pipe with a file.

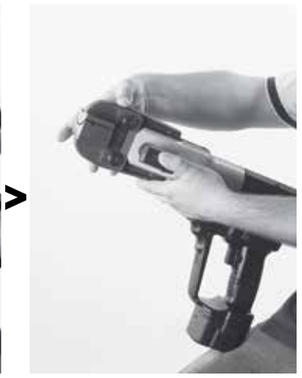

3 Creating the lugs for Ø76, Ø100 or Ø168 cut pipe

Open the retaining pin at the front of the machine by pressing the jaw release button*

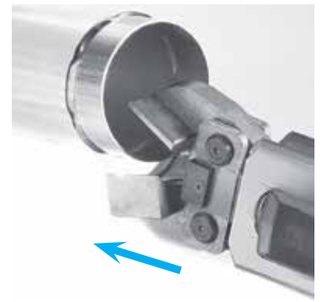

Place the jaws in the housing.

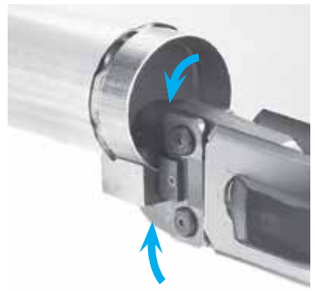

Lock in position by closing the retaining pin.

PROCEDURE

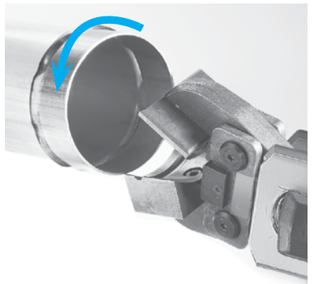

4

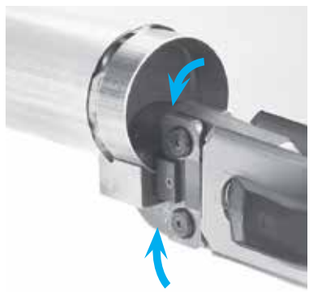

Manually open the jaws of the clamp and insert the aluminium pipe into the clamp as far as it will go.

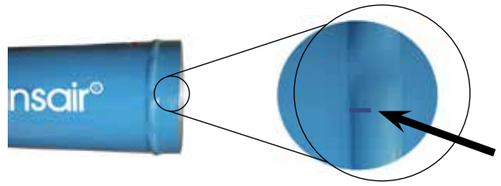

Release the jaws. Press the trigger and crimp the tube until a 'snap' sound is heard.

Re-open the two jaws to remove the pipe.
Position the clamp end next to the lug mark: this will avoid the lugs overlapping.
Rotate the pipe slightly.

Repeat the operation until the required minimum number of lugs for each diameter is achieved.

	Ø 76	Ø 100	Ø 168
Number of lugs	6	7	10

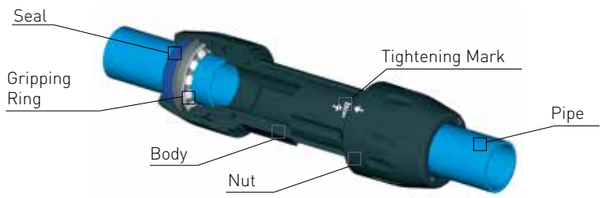

IMPORTANT: DO NOT OVERLAP THE LUGS!

TRANSAIR® PIPE-TO-PIPE & STUD CONNECTORS

General

Ø 16.5
Ø 25
Ø 40

INSTANT CONNECTION BY MEANS OF A GRIPPING RING

Ø16.5, Ø25 and Ø40 connectors secure instantly to Transair® aluminium pipe. Simply insert the pipe into the connector up to the connector insertion mark.

The internal gripping ring is then automatically secured and the connection is complete.

Ø 50
Ø 63

SNAPRING QUICK-FIT CONNECTION

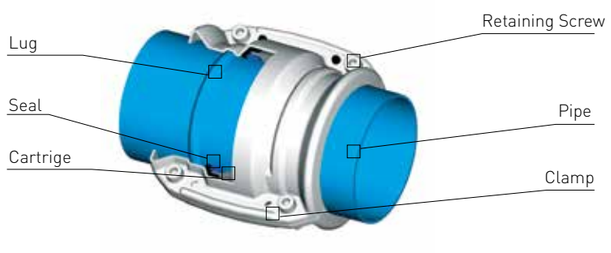

Ø50 and Ø63 connectors are quickly secured to Transair® aluminium pipe by means of a SnapRing which makes the connector fully integrated with the pipe.

Connection is achieved by simply tightening the nut.

Ø 76
Ø 100
Ø 168

LUG & CLAMP QUICK-FIT CONNECTION

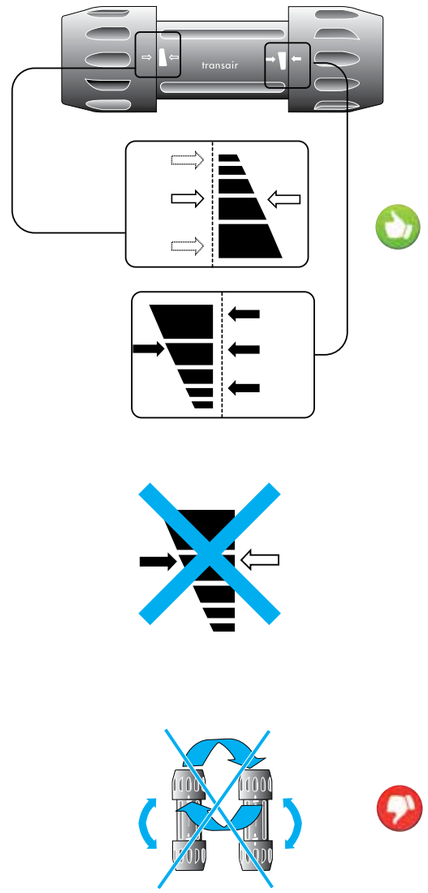

Ø76, Ø100 and Ø168 clamps secure instantly to Transair® aluminium pipe.
Simply position the formed pipe within the Transair® cartridge, which acts as a seal.

Close the Transair® clamp to secure the connection and finally tighten the 4 retaining screws.

PRE-ASSEMBLED TIGHTENING INDICATORS FOR
Ø 16.5
Ø 25
Ø 40
CONNECTORS

There are important visual markings on the bodies and nuts of Transair® Ø16.5, Ø25 and Ø40 connectors. These are represented by solid and empty arrows and indicate the optimum torque.
When assembling Transair® connectors, the nuts are tightened to a pre-defined torque on the body of the connector.

This torque guarantees the seal and safety of each connection.
Before using Ø16.5, Ø25 or Ø40 connectors, ensure that these arrow marks are correctly aligned with each other.

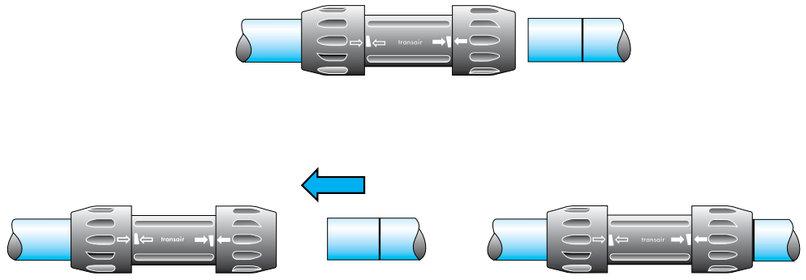

There is no need to loosen the nuts prior to joining Ø16.5, Ø25 and Ø40 connectors to Transair® aluminium pipe.
Do not exchange the nuts.
Do not use a nut on another connector.

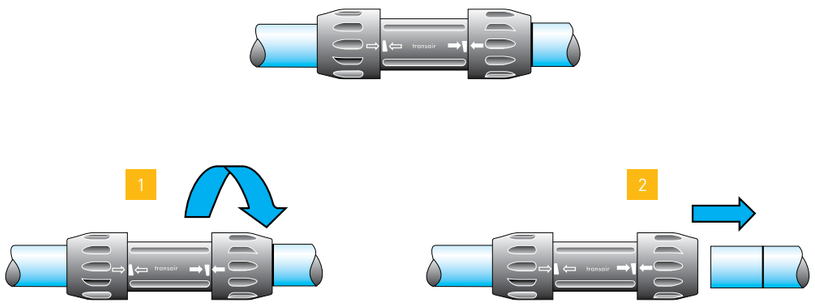

Connection / Disconnection

Ø 16.5
Ø 25
Ø 40

CONNECTION

DISCONNECTION

Simply insert the pipe into the connector up to the connection mark.
To disconnect, unscrew the nut by one half turn and remove the pipe.

Lateral dismantling: see page 84 of this catalogue.

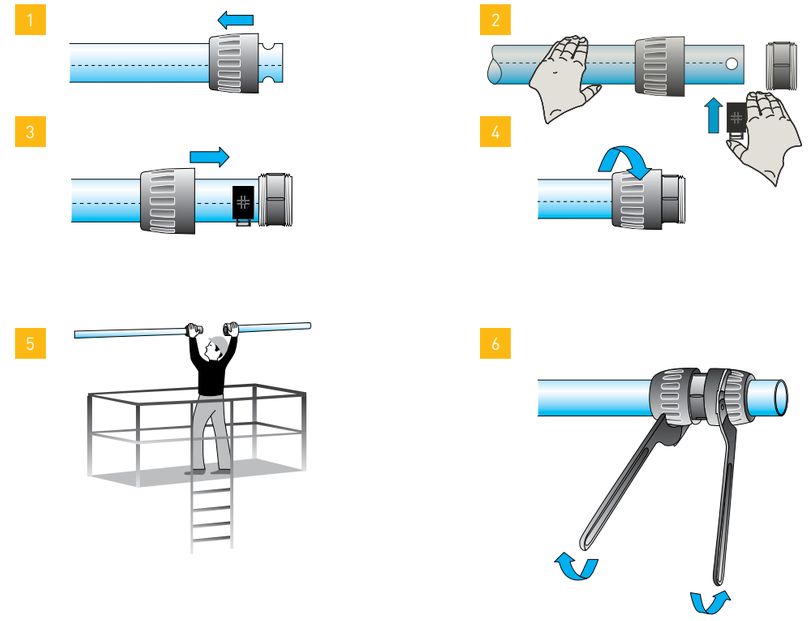

NB – when using end caps (6625)

The insertion length is greater for end caps than for other Transair® connectors. The connection mark should be applied to the pipe by means of a marker and tape measure, using the following values:

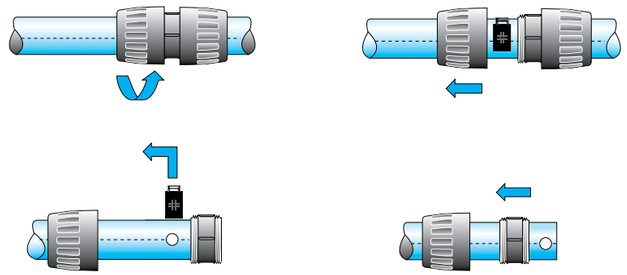

- Ø16.5: 39mm
- Ø25: 42mm
- Ø40: 64mm

Ø 50
Ø 63

CONNECTION

DISCONNECTION

1 - Unscrew one of the connector nuts and fit over the pipe.
2 - Position the SnapRing in the appropriate housings (2 holes at the end of the pipe). Position the SnapRing manually **with one hand.**
3 - Bring the nut towards the body, that has been previously positioned at the end of the pipe, until it stops against the double clamp.
4 - Tighten the nut by hand.
5 - Bring the two pipes together.
6 – Complete the assembly by 1/2 rotation with Transair® tightening spanners ref. 6698 05 03.
7 - To disconnect, perform the same operations in reverse order.

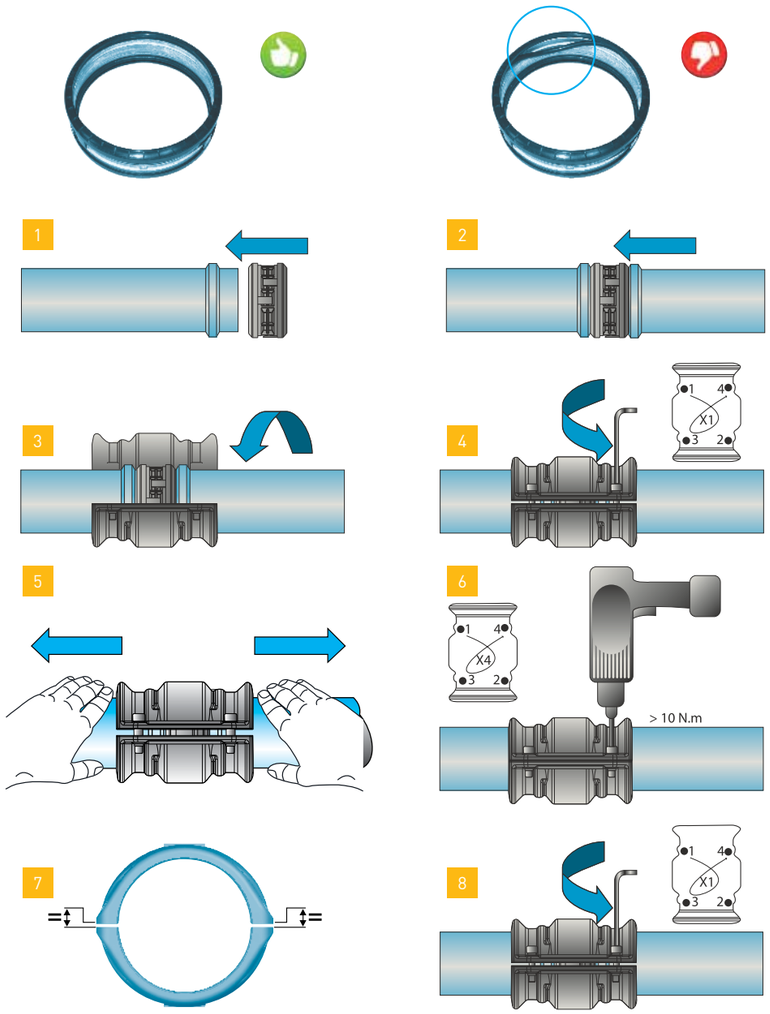

Lateral dismantling: see page 84 of this catalogue.

TRANSAIR® PIPE-TO-PIPE & STUD CONNECTORS

Connection / Disconnection

Ø 76
Ø 100
Ø 168

CONNECTION

See Assembly Guide

1 - Slip the cartridge over the end of the first pipe fully up to the shoulder.
2 - Bring the second pipe to the cartridge and slide fully up to the shoulder.
3 - Position the clamp over the cartridge / pipe assembly.
4 - Hand tighten the pre-fitted screws with an Allen key (6 mm for Ø76 and Ø100, 8mm for Ø168).
5 - Pull the pipes fully back towards the outside of the clamp.
6 - Fully tighten the clamp screws.
Mini tightening torque:10Nm
Maximum tightening torque: 40m.N
7 - For effective clamp sealing, screw tightening should be performed on alternate sides of the clamp as shown above.
8 - Check manually with an Allen key that the screws are correctly tightened.

To disconnect, perform the same operations in reverse order.

SYSTEM MODIFICATION

FOR DIAMETERS Ø16.5 - Ø25 - Ø40 ONLY

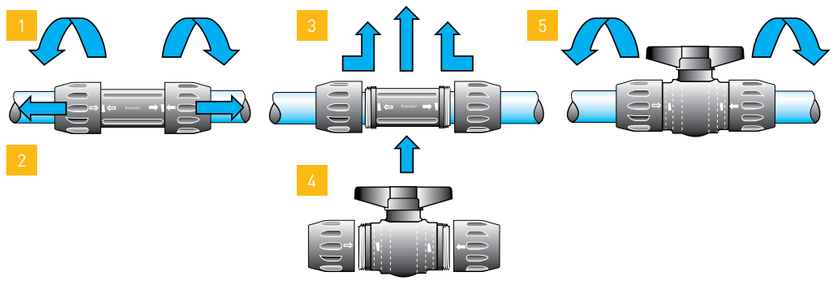

REPLACING A PIPE-TO-PIPE CONNECTOR WITH A TEE

1 - Loosen the 2 nuts.
2 - Slide them along the pipe on either side of the connector.
3 - Remove the body of the connector, together with the nuts. Re-tighten the nuts on the body of the connector for a further use.
4 - Slide the nuts of the tee and position the body of the tee between the 2 pipes such that the solid and empty arrows are facing each other.
5 - Re-tighten the nuts until the empty and solid arrows are aligned with each other.

REPLACING A PIPE-TO-PIPE CONNECTOR WITH A BALL VALVE

FOR DIAMETERS Ø16.5 - Ø25 - Ø40 ONLY

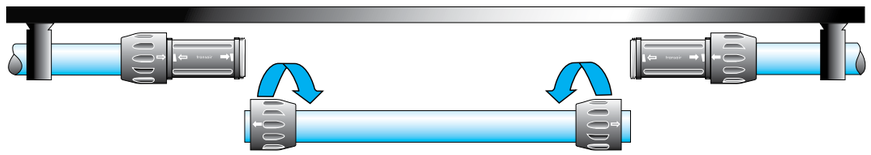

1 - Loosen the 2 nuts.
2 - Slide them along the pipe on either side of the connector.
3 - Remove the body of the connector, together with the nuts. Re-tighten the nuts on the body of the connector for a further use.
4 - Slide the nuts of the valve and position the body of the valve between the 2 pipes so that the empty and solid arrows are facing each other
5 - Re-tighten the nuts until the empty and solid arrows are aligned with each other.

TRANSAIR® PIPE-TO-PIPE & STUD CONNECTORS

Practical Examples

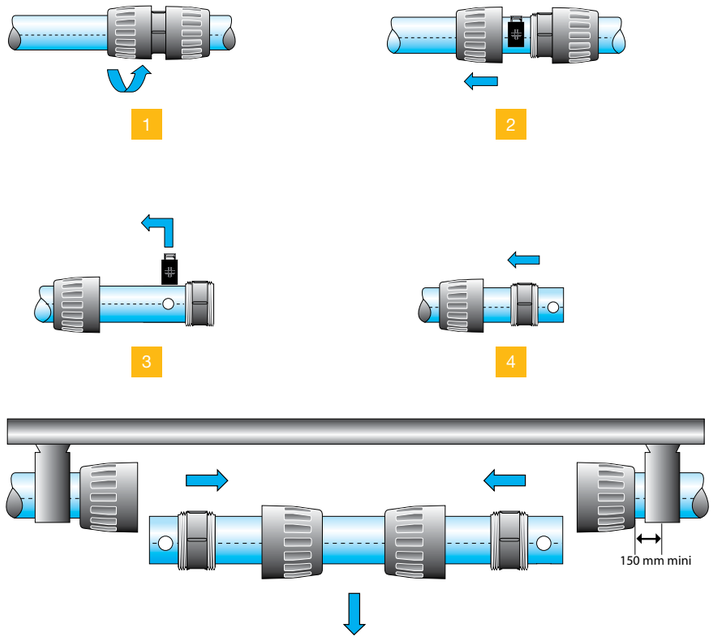

LATERAL DISMANTLING

Ø 16.5
Ø 25
Ø 40

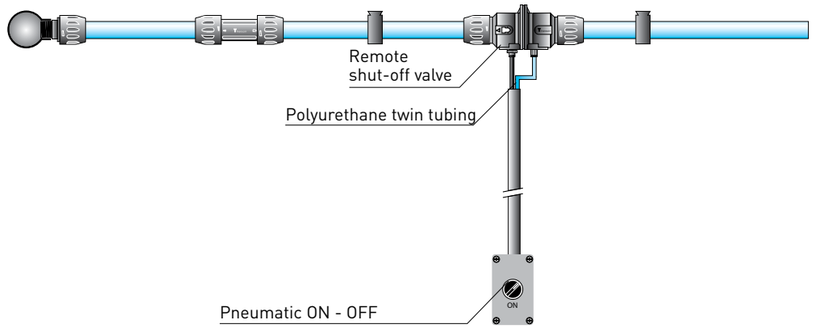

Loosen the nuts located on the side of the pipe to be removed and slide them along the pipe.
Then remove the pipe.

Ø 50
Ø 63

1 - Loosen the connector nuts on the ends of the pipe to be removed
2 - Slide them along the pipe.
3 - Remove the SnapRing from its housings.
4 - Slide the SnapRing and the connector body along the pipe which is to be removed.
5 - Repeat the operation at the other end of the pipe and laterally remove the pipe, complete with the assembly components.

TRANSAIR®
Ø 40
SHUT-OFF VALVE

APPLICATION

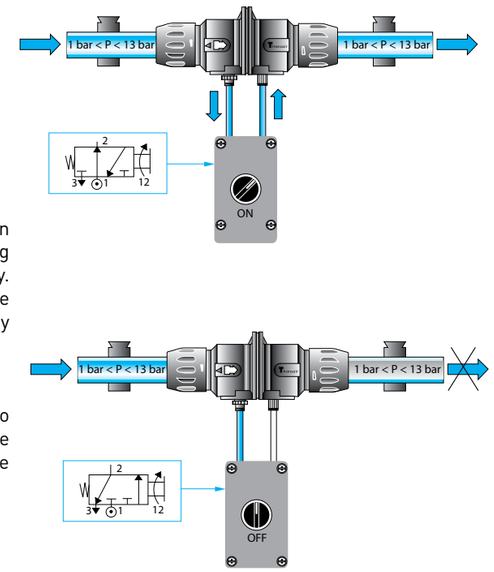

Assembled by simple and fast connection to aluminium pipe, the Transair® Ø40 remote shut-off valve allows network supply to be rapidly and safely opened and closed either at ground level or by remote control.
The Transair® remote shut-off valve thus guarantees :
- Personal safety, by eliminating all hazards related to working at heights.
- Servicing speed, by removing the need for special access equipment (ladder, platform etc)

OPERATING PRINCIPLE

Single acting valve - normally closed.

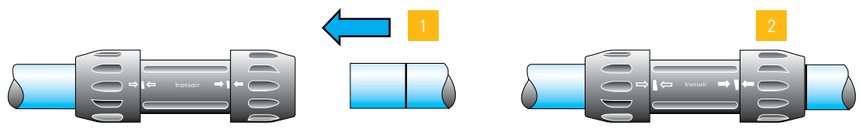

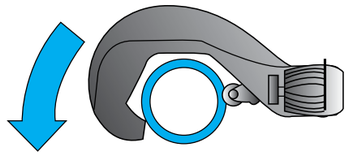

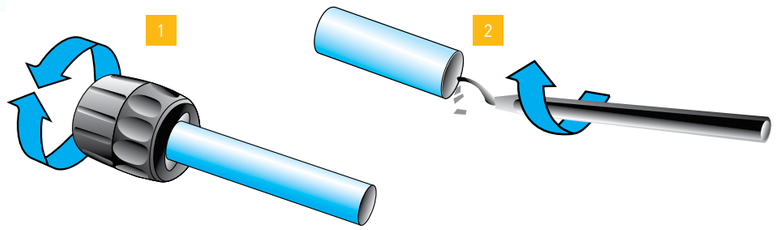

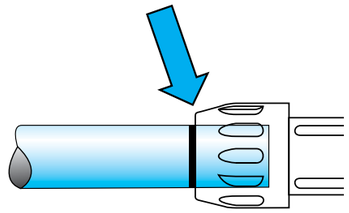

For compressed air networks:
the valve control pressure can be taken upstream of the isolating valve, with no external power supply. Control is performed through the control unit connected to the valve by means of a push-in connector.

For vacuum networks:
a compressed air supply external to the control unit is required, and the corresponding valve port must be closed in order to prevent loss.

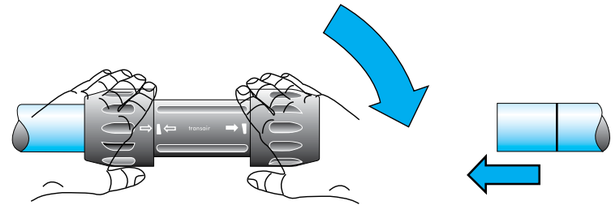

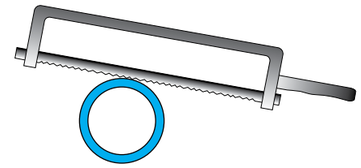

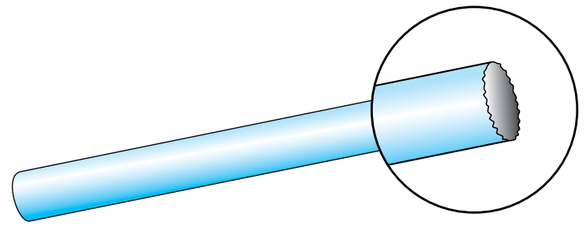

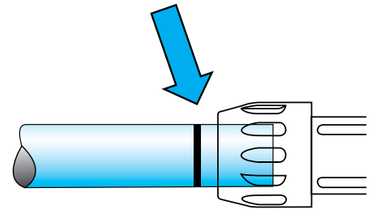

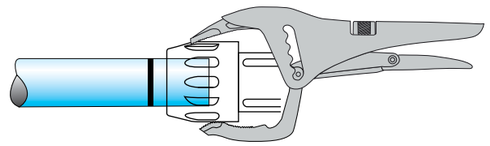

TRANSAIR® PIPE-TO-PIPE & STUD CONNECTORS

Do's

Ø 16.5 - Ø 25 - Ø 40	
CONNECTION	
USE A PIPE CUTTER	
CAREFULLY CHAMFER AND DEBURR THE PIPE AFTER CUTTING OR DRILLING	
CHECK THAT THE PIPE IS CORRECTLY POSITIONED IN THE CONNECTOR	

Don'ts

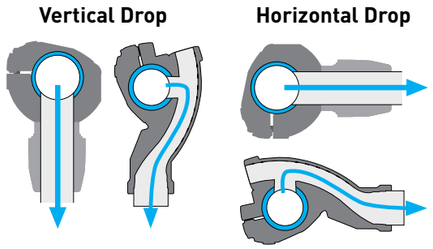

Ø 16.5 - Ø 25 - Ø 40	
DON'T LOOSEN THE NUTS DURING ASSEMBLY	
DON'T CUT THE PIPE WITH A SAW	
DON'T USE NON-DEBURRED PIPE	
DON'T FAIL TO MAKE THE PIPE SECURE	
DON'T OVERTIGHT WITH PLIERS DON'T SCREW BEYOND THE MARKS	
DON'T SWOP THE NUTS OF A CONNECTOR DON'T USE A NUT ON ANOTHER CONNECTOR	

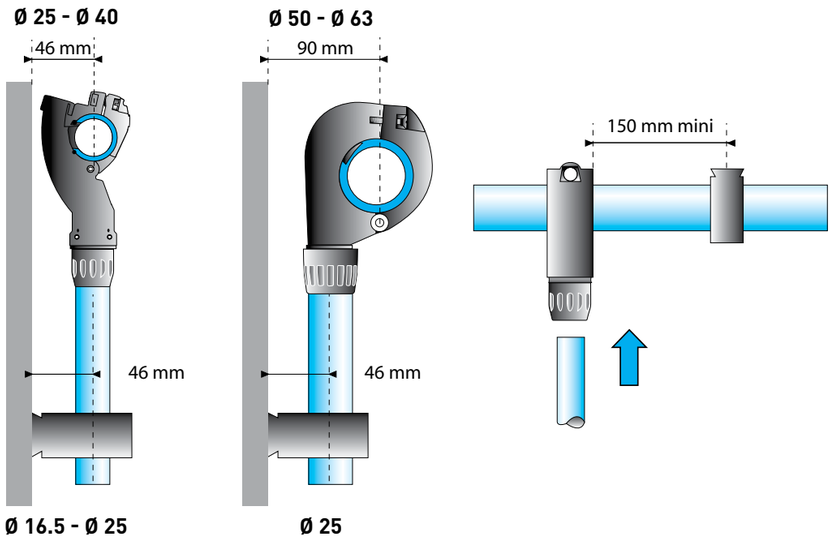

TRANSAIR® QUICK ASSEMBLY BRACKETS

General

SPECIFIC INSTRUCTIONS FOR FITTING A BRACKET TO Ø 25 Ø 40 Ø 50 Ø 63 PIPE

The easy addition of a new drop or bypass onto an existing length of pipe is an important consideration for any air pipework system.
Transair® quick assembly brackets are designed for this very purpose, without the need to cut the pipe.
A "swans neck" built into the brackets retains condensate water in the main line. Thanks to its small size, the Transair® quick assembly bracket facilitates new additions in the tightest places and can be used for connecting horizontal branch lines and vertical drops..

For Ø25 and Ø40 Transair® quick assembly brackets, the pipe centre to wall distance is equal to the bracket centre to wall distance, i.e. 46mm.

For Ø50 and Ø63 Transair® quick assembly brackets the pipe centre to wall distance is 90mm and the Ø25 and Ø40 bracket centre distance is 46mm.

Furthermore, Transair® clips should be fitted at a distance of at least 150mm from a quick assembly bracket in order to allow for the expansion / contraction of aluminium pipe

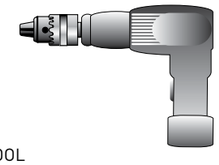

Fitting a Quick Assembly Bracket

TO Ø 25 Ø 40 Ø 50 Ø 63 PIPE

TOOLS REQUIRED

DRILLING TOOL FOR ALUMINIUM PIPE 6698 02 02 FOR Ø25 AND 6698 02 01 FOR Ø40, Ø50 AND Ø63.

DRILL

DRILLING JIG FOR ALUMINIUM PIPE 6698 01 03

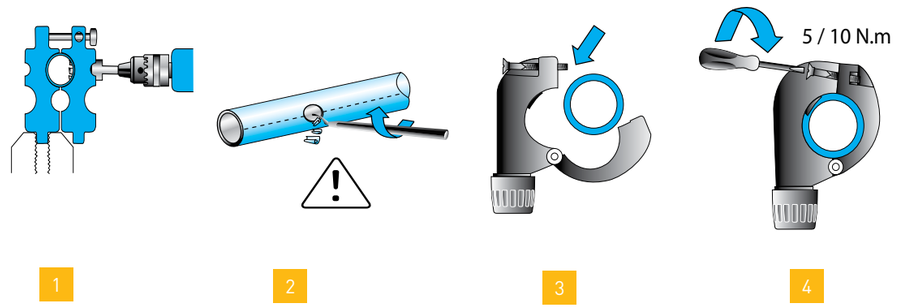

DEBURRING TOOL FOR ALUMINIUM PIPE 6698 04 02

PERMANENT MARKER PEN

PROCEDURE

1 - Mark the pipe at the desired position for the bracket, using the same locator mark when several take-off points need to be aligned uniformly. Place the drilling jig ref. 6698 01 01 in a vice or on the floor.
To drill a Ø40 hole, remove the retaining bolt in the jig using an allen key and place the pipe in the jig. The locator mark on the pipe should be aligned with the appropriate guide marks on the side of the jig.
Two guide lines on either side of the jig provide a rapid indication of whether the pipe is correctly positioned (the guide lines match the locator marks on the pipe).
Close the jig and drill a hole using the appropriate drilling tool:
- Ø25: Ø16 hole > ref. 6698 02 02 drilling tool
- Ø40 - Ø50 - Ø63: Ø 22 hole >ref. 6698 02 01 drilling tool

Recommended rotation speed: 650 rpm
NB: drill without lubrication.

2 - Release the pipe, deburr and remove any swarf and the cut circular piece of pipe. Repeat the operation for the number of brackets that you wish to fit.

3 - Position the quick assembly bracket using its location pin.

4 - Tighten the nut with an Allen key 5mm.

FITTING A BRACKET TO A PRESSURISED SYSTEM

TOOLS REQUIRED

Use the under pressure drilling tool (EA98 06 00) to fit a bracket to an existing pressurised system. This can be simply done with use of a standard drill.

PROCEDURE

1 - Position the pressurised system bracket and tighten with the recommended tightening torque.
2 - Screw the drilling tool onto the ball valve. Drill fully.
3 - Remove the drill and close the ball valve immediately.
4 - Dismantle the drilling tool.

NB: For DN25 and DN40 brackets, an additional manipulation is required between step 1 and step 2.

1-1 Screw the assembly onto the ball valve. Ensure that the valve is open.

TRANSAIR® FLEXIBLE HOSES

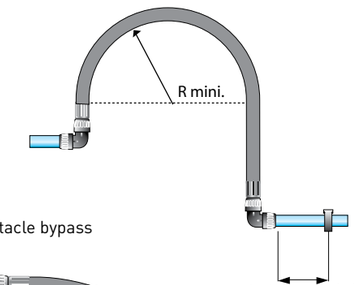

General

APPLICATIONS

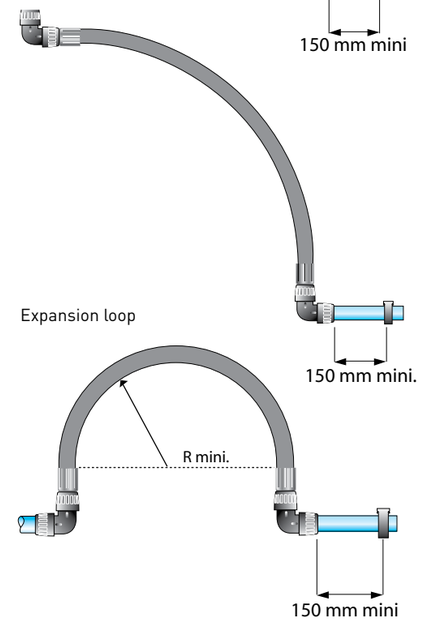

Transair® flexible hose can be easily connected to other Transair® components and can be rapidly installed without prior preparation or cutting.
Thanks to is small bend radius, it requires minimum space and avoids mechanical stress within the network.
Robust, Transair® flexible hose is resistant to both compressor oils and to fire.

Ø (mm)	Length (mm)	Part Numbers	Rmini (mm)
25	570	**1001E25 00 01**	100
25	1500	**1001E25 00 03**	100

Level change

Obstacle bypass

Expansion loop

SAFETY

Anti-whiplash straps

In order to avoid the risk of whiplash accidents, Transair® recommends the use of anti-whiplash straps, placed on either side of the connection.

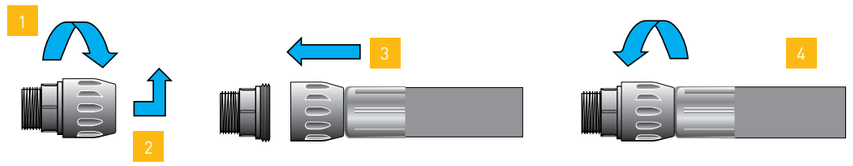

Ø25 to 100: 6698 99 03
Ø168: 6698 99 07

If Transair® flexible hose is exposed to tear, the anti-whiplash assembly prevents it from snaking (safety device in accordance with ISO 4414 standard).

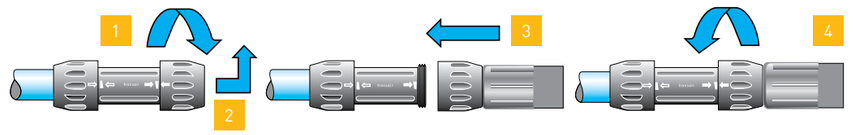

Network Connection

Ø25 Ø40 — USING A MALE STUD FITTING

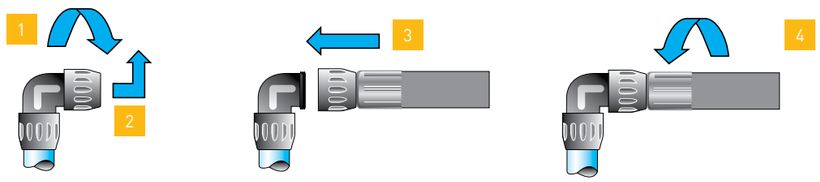

1 - Loosen the nut on the stud fitting.
2 - Remove it.
3 - Move the swagged end of the hose onto the exposed stud thread.
4 - Tighten the nut.

USING A PIPE-TO-PIPE CONNECTOR

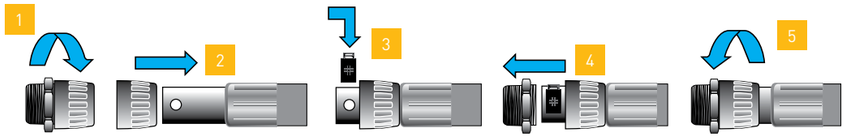

USING A 90° ELBOW

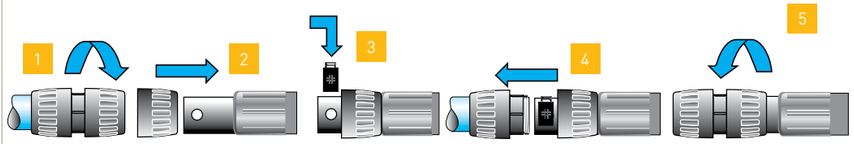

Network Connection

Ø50 - Ø63 — USING A MALE STUD FITTING

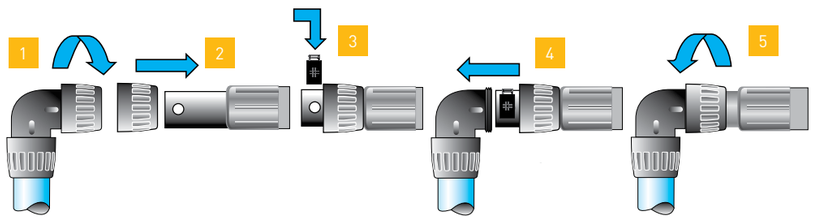

1 - Loosen the nut on the stud fitting and remove it.
2 - Place the nut over the swaged end of the flexible hose.
3 - Place the pipe connector clamps in the housings on the hose.
4 - Slide the nut forward to the end of the flexible hose, and assemble onto the male thread.
5 - Tighten the nut using 6698 05 03 spanner set.

ATTACHMENT AND SUPPORT

Transair® Attachment

TRANSAIR® CLIP FOR Ø 16.5 Ø 25 Ø 40 Ø 50 Ø 63 RIGID PIPE

The Transair® fixing clip is the basic component for mounting pipe when installing. Ø16.5 – Ø25 – Ø40 – Ø50 - Ø63 Transair® aluminium networks. Only this clip should be used since it since it allows expansion and contraction of the pipe to occur freely.

To ensure good system stability, we recommend the use of at least 2 clips per pipe.
Transair® aluminium pipe should only be mounted using these clips. They should not be substituted by any other type of clip or fixing.

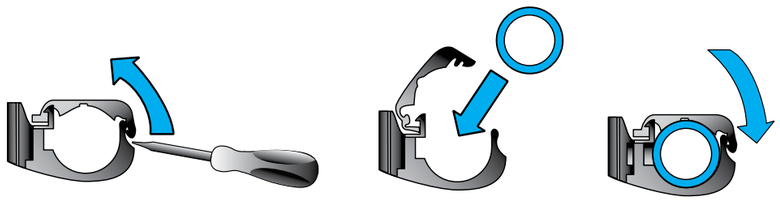

Ø	L (m)	Dmax (m)
16.5	3	2.5
16.5	4.5	3
25	3	2.5
25	6	3
40	3	2.5
40	6	4
50	3	2.5
50	6	4
63	3	2.5
63	6	4

PROPERTIES

- Transair® fixing clips for Ø16.5 - Ø25 - Ø40: M8 nuts
- Transair® fixing clips for Ø50 - Ø63: M10 nuts

The Transair® threaded rod adaptor 6697 00 02 allows Transair® ˙pipe clips Ø16.5 - Ø25 - Ø40 to be easily suspended under M10 threaded rod.

PROCEDURE

1 - Place the clip as required and open it using a screwdriver.
2 - Insert the pipe into the clip.
3 - Close the clip.

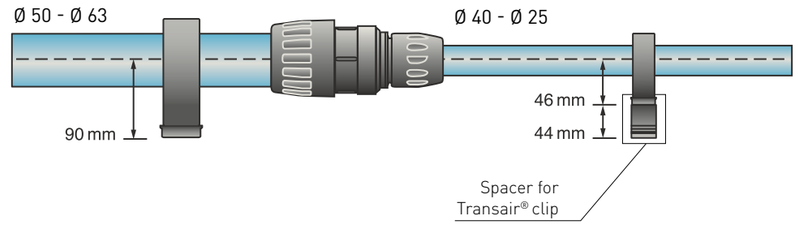

Transair® Attachment

SPACER FOR Ø16.5 Ø25 Ø40

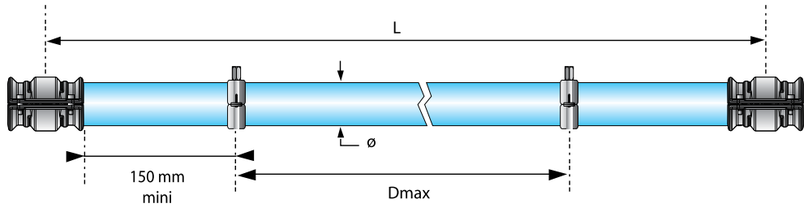

The Transair® 6697 00 03 spacer is used for fitting a run of Transair® pipe using different diameters.

EXAMPLE:

TRANSAIR® FIXING CLIP FOR Ø 76 Ø 100 Ø 168 NETWORKS

Ø	L (m)	Dmax (m)
76	3	2.5
76	6	5
100	3	2.5
100	6	5
168	3	2.5
168	6	5

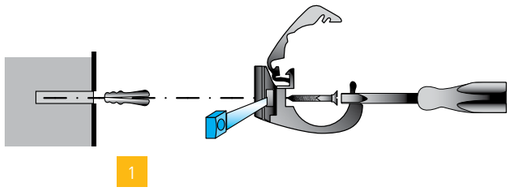

To ensure good network stability, we recommend the use of at least 2 fixing clips per length of pipe. Transair® fixing clips for Ø76, Ø100 and Ø168 networks: M8/M10 thread

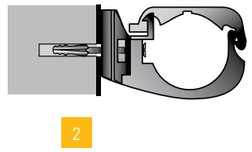

ATTACHMENT AND SUPPORT

Supporting a Transair® System

DIRECTLY ONTO A WALL

OFFSET FROM A WALL

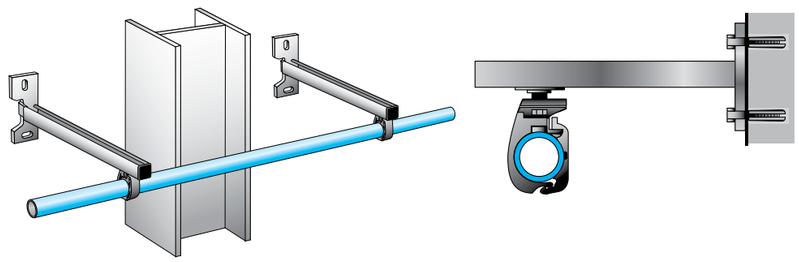

1 - Remove the nut at the base of the pipe clip using a screwdriver. Insert the screw by passing it through the clip.

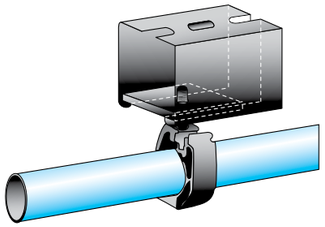

2 - Tighten the screw.

U-CHANNEL TYPE MOUNTING BRACKET

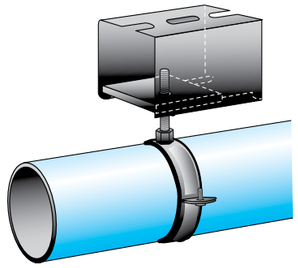

Transair® U-channel assemblies are used to offset networks and to bypass obstacles. They comprise sectional rail ref. 6699 01 01 and a series of attachment accessories 6699 01 02.
For offsetting a Ø63 / Ø76 and Ø100 air system, we recommend the use of the rail clip attachment assembly ref. 6699 01 03. .

Ø16.5, Ø25, Ø40 > Fixation clip on rail 6699 01 04
Ø50, Ø63, Ø76, Ø100 and Ø168 > Fixation clip on rail 6699 01 03

Expansion / Contraction

In order to compensate for the effects of expansion and contraction due to variations in temperature, any fluctuations in the length of the Transair® aluminium pipe network should be calculated.

EXPANSION CALCULATION

L: length of Transair® straight line to be installed (in m)
△T: variation between temperature when installing and maximum operating temperature (in C°)
△L: line length variation (in mm)
For Transair® Ø-16.5 - Ø25 - Ø40 - Ø50- Ø63 - Ø76 - Ø100 aluminium pipe networks:

$$\triangle L = \underset{1}{(a \times L)} + \underset{2}{(0.024 \times L \times \triangle T)}$$

1 - Expansion related to pipe retraction in the connector
2 - Expansion related to temperature variations

	Ø16.5	Ø25	Ø40	Ø50	Ø63	Ø76	Ø100	Ø168
Pipe 3m	a=0.06	a=0.20	a=0.40	a=0.68	a=0.68	a=1.0	a=1.0	a=1.34
Pipe 6m (4.5m for Ø16.5)	a=0.045	a=0.10	a=0.20	a=0.34	a=0.34	a=0.50	a=0.50	a=0.67

DIRECTION CHANGE

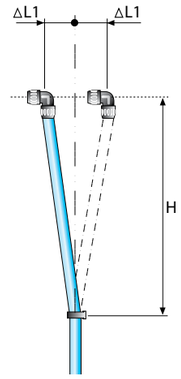

- For Transair® aluminium pipe networks Ø16.5 - Ø25 - Ø40 - Ø50 - Ø63

△L1 = H x 20
H in m, △L1 in mm

USING AN ELBOW

- For Transair® aluminium pipe networks Ø76 - Ø100

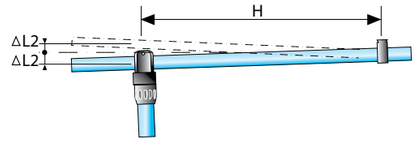

△L1 = H x 13.33

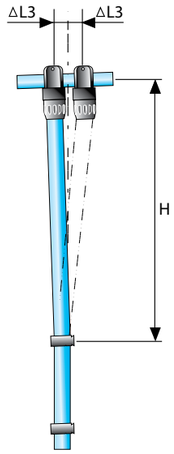

USING A QUICK ASSEMBLY BRACKET

- For Transair® aluminium pipe networks Ø16.5 - Ø25 - Ø40 - Ø50 - Ø63

△L2 = H x 8.67
△L3 = H x 8.67
H in m, △L2 and △L3 in mm

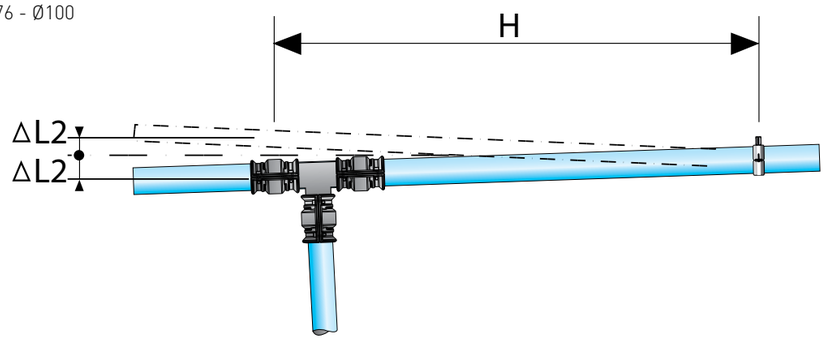

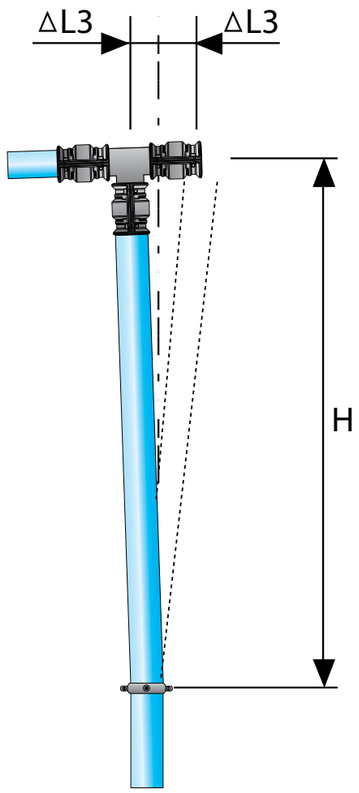

Expansion / Contraction

CHANGING DIRECTION WITH A TEE PIECE

- For Transair® aluminium pipe networks Ø76 - Ø100

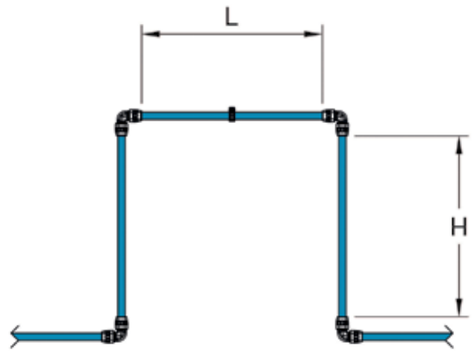

△L2 = H x 6.67
△L3 = H x 6.67
H in m, △L2 and △L3 in mm

EXPANSION LOOP

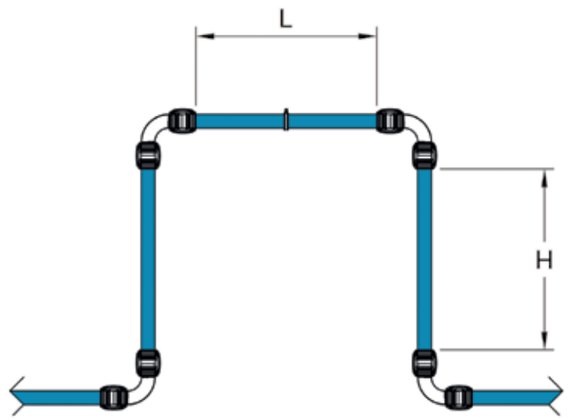

- Maximum compensation: Ø16.5 mm to Ø63 mm:

△L (in mm) = H (in m) x 40

Ø76 mm to Ø168 mm

△L (in mm) = H (in m) x 27

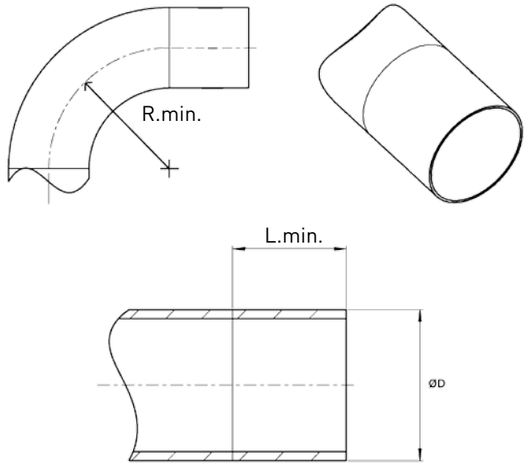

BENDING TRANSAIR® ALUMINIUM PIPE

All Diameters

Thanks to their technical characteristics, Transair® aluminium pipe can be bended according to the following specifications:

Transair®	R min. (mm)	L min. (mm)
Ø 16.5	102	185
Ø 25	154	185
Ø 40	250	185
Ø 50	300	185
Ø 63	394	185
Ø 76	317	185
Ø 100	423	185
Ø 168	700	185

TESTING A NETWORK

Final Commissioning

Transair® Advice for Final Commissioning of a Compressed Air Network

Example - considering a system working at 6 bar pressure

1. Run compressor at 3bar pressure to check integrity of the Transair® system and that the compressors are running correctly.
2. Leave the pipework under pressure for a period of 12 hours overnight. During this period the Transair® system should be isolated from machines and tools (drop valves should be closed).
3. Upon checking of the system after the 12 hour period, the compressor read can show a 0.3 bar pressure loss (from 3 bar to 2.7bar with constant temperature).
4. The system pressure is increased to design pressure (6 bar in this example) for a further 4 hours again (with no leak recorded from the Transair® system).
5. The system is then increased to 9 bar (1.43 x the max operating pressure) for a period of 1 hour with no further issues (NB: for this test, pressure of the system can exceed the maximum working pressure).
6. Purge the system, and you can start to work.

Legal Requirement for Installers according to PED 97/23/EU - ANNEX I Essential Safety Requirements

3.2. 3.2. Final Assessment:
Pressure equipment must be subject to final assessment as described below.
3.2.1. Final Inspection:
Pressure equipment must undergo a final inspection to assess visually and by examination of the accompanying documents compliance with the requirements of the Directive. Test carried out during manufacture may be taken into account.
3.2.2. Proof Test:
Final assessment of pressure equipment must include a test for the pressure containment aspect, which will normally take the form of a hydrostatic pressure test at a pressure at least equal, where appropriate, at the maximum allowable pressure multiplied by the coefficient 1.43.

For category I series-produced pressure equipment, this test may be performed on a statistical basis. For series-produced pressure equipment under the article 4.3, this test is not necessary..

For the Transair® system, the category is defined according to the diameter and the working pressure:

	1 bar	7 bar	10 bar	13 bar	16 bar
Ø16.5	Article 4.3	Article 4.3	Article 4.3	Article 4.3	Article 4.3
Ø25	Article 4.3	Article 4.3	Article 4.3	Article 4.3	Article 4.3
Ø40	Article 4.3	Article 4.3	Article 4.3	Article 4.3	Article 4.3
Ø50	Article 4.3	Article 4.3	Article 4.3	Article 4.3	Article 4.3
Ø63	Article 4.3	Article 4.3	Article 4.3	Article 4.3	Article 4.3
Ø76	Article 4.3	Article 4.3	Article 4.3	Article 4.3	Catégorie I
Ø100	Article 4.3	Article 4.3	Article 4.3	Catégorie I	Catégorie I
Ø168	Article 4.3	Catégorie I	Catégorie I	Catégorie I	Catégorie I

Requested Documentation for Category I Equipment

To comply with the PED here is a list of documents you should provide to the end user and how to get them for Transair®.

- **Assembly Guide**: for every diameter it is delivered with the Transair® pipes or fittings.
- **CE Certificate**: Transair® conforms the European Pressure Equipment Directive 2014/68/UE for article 4.3 and category I. Please contact Parker Transair for the latest version.
- **ISO 9001 Certificate**: this document has a validity date. Please contact Parker Transair for the latest version.
- **Material Certificate B3.1B for Pipes:** it attests the conformity of the aluminium used (according to NF EN 10204). Ask for this document when placing the order. If needed you can also request it after delivery with the batch number marked on the pipes (see example on this picture).

- **Material Certificate for Fittings:** the certificate 2.2 attests the quality checks completed during production (according to NF EN 10204). Ask for this document when placing the order, it can't be issued after as the name of the client and the order number have to be indicated on the certificate.
- **Isometric Plan of the System:** if needed, the Transair® quotation service can help you providing a drawing of the network (transair.quotation@parker.com).
- **Calculation Note:** Transair® aluminium pipes are produced according to EN 755-2, which defines the mechanical characteristics, and the TÜV certificate includes control of the design and of the safety factors. For further information, please contact Parker Transair.

TECHNICAL SPECIFICATIONS

Fluids

- Industrial water
- System compatible with additives (glycol or inhibitors) which prevent the formation of algae or fungus (list available upon request)
- Lubricating oils
- Compressed air (dry, wet, lubricated)
- Vacuum
- Inert gases (argon, nitrogen)
- Others: please consult us

Maximum Working Pressure According to the Temperature

Working Pressure

- 10 bar from -20°C to +60°C
- 7 bar from -20°C to +90°C

Expansion Coefficient

- Expansion coefficient of Transair® stainless steel pipe: 0.016 mm per metre per degree celcius

Resistance

- to corrosion
- to aggressive environmnents
- to mechanical shocks
- to thermal variations
- to U.V.

Environment and Sustainable Development

Transair® materials are 100 % recyclable.

Water Hammer

Ø22, Ø28: comply with standard BS, 7291 part 1
Ø42, Ø60, Ø76, Ø100: comply with standard NF T54-091

CHEMICAL COMPATIBILITY

1 Compatible **2** Compatible (except for diameters 22-28 mm in bronze) **3** Do not use

SIZING A NETWORK

Select the Transair® diameter for your application, based on required flow against pressure drop.

Estimated values for a closed loop network, a pressure of 4 bar with less than 10% pressure drop.
Velocity: 4 m/s.

Estimated Flow Rate				Equivalent Length									
				32.8 ft	65.6 ft	98.4 ft	131.2 ft	164 ft	246 ft	328 ft	492 ft	656 ft	984 ft
m³/h	l/s	l/min	cfm	10 m	20 m	30 m	40 m	50 m	75 m	100 m	150 m	200 m	300 m
0.5	0.14	8	0.3	22	22	22	22	22	22	22	22	22	28
1	0.28	17	0.6	22*	22*	22*	22*	22*	28	28	28	28	42
2.5	0.69	42	1.5	22*	28*	28*	28*	42	42	42	42	42	42
3.5	0.97	58	2.1	28	28	42	42	42	42	42	42	42	60
5	1.39	83	3	28*	42*	42*	42*	42*	42*	42*	60	60	60
10	2.77	167	6	42*	42*	42*	60*	60*	60*	60*	60*	76	76
15	4.17	250	9	42*	60*	60*	60*	60*	60*	76	76	76	76
20	5.56	333	12	60*	60*	60*	60*	60*	76*	76*	76*	100	100
30	8.33	500	18	60*	60*	76*	76*	76*	76*	100*	100*	100*	100*
40	11.11	667	24	76*	76*	76*	76*	76*	100*	100*	100*	100*	
50	13.89	833	29	76*	76*	76*	100*	100*	100*	100*			
75	20.83	1250	44	100*	100*	100*	100*	100*					
80	22.22	1333	47	100*	100*	100*	100*	100*					
100	27.78	1667	59	100*	100*	100*	100*						

* These results should be taken into account in order to ensure the best practice for industrial water networks.
An anti-water hammer device is necessary for the protection of regulation components of other fragile elements.

Example (with the above values)
- Main network length (main ring): 50 metres
- Required flow rate: 15 m³/h
- Working pressure: 4 bar
- Pressure drop< 10 %
- Velocity: 4m/s
- The most suitable Transair® diameter is: Ø60.

DIN 1988
The pressure drop per diameter is stated for a flow rate and a velociy, at a temperature of 20°C.
Technical data sheet available upon request.

TRANSAIR® STANDARDS AND CERTIFICATIONS

Transair® stainless steel range certifications fall within the standard and regulation universe described on pages 8 and 9 of this catalogue.

Standards Related to Transair® Stainless Steel Pipe

Transair® stainless steel range conforms to the standards below related to mechanical and chemical properties per diameter.

	Ø 22 - Ø 28	Ø 42 - Ø 60	Ø 76 - Ø 100
Manufacturing Standards	EN 10217-7	EN 10217-7	EN 10217-7
Grade	EN 10088-2, 4404, AISI 316L	1.4301 / AISI 304	1.4301 / AISI 304
Welding Standard	DIN 17 457, EN 10217-7	DIN 17 457, EN 10217-7	DIN 17 457, EN 10217-7
Tolerances	DVGW - W541	EN 1127D4/T3	EN 1127D4/T3

The quality and consistency of the stainless steel grade used allow to bend Transair® stainless steel pipe according to the best practice, as described in page 149 of this catalogue.

Applications

21 CFR Part 11

FDA Certificate – CFR 21

Transair® stainless steel drops diameter 22mm presented on pages 152 and 153 of this catalogue conform to FDA – CFR 21 requirements.

Safety

UL94 Certificate

All Transair® components are non-flammable with no propagation of flame.

Pipe-to-pipe connectors, ball valves and butterfly valves conform to UL94HB standards.

The above mentioned certificates are available upon request.

TRANSAIR® CONNECTION TECHNOLOGIES

Transair® innovative technology takes into account the specific requirements of each diameter and provides the user with an optimum safety coefficient and easy connection.

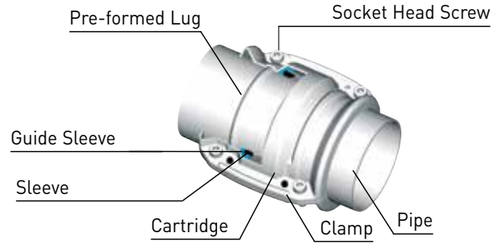

Ø22 - Ø28mm

Pipe-to-pipe and stud connectors in Ø22 and Ø28 can be immediately connected to Transair® stainless steel -pipe – simply push the pipe into the connector up to the connection mark. The gripping ring of each fitting is then automatically secured and the connection is safe.

Ø42 - Ø60mm

Pipe-to-pipe and stud connectors in Ø42 and Ø60 can be quickly connected to Transair® stainless steel pipe by means of a double clamp ring. This secures the connection between the nut and the pipe – tightening of the nuts secures the final assembly.

Ø76 - Ø100mm

Pipe-to-pipe and stud connectors in Ø76 and Ø100 can be quickly connected to Transair® stainless steel pipe. Position the pipes to be connected within the Transair® cartridge and close/tighten the Transair® clamp.

THE GOLDEN RULES OF INSTALLATION

Installation Instructions

General

When maintaining or modifying a Transair® system, the relevant section should be purged prior to the commencement of any work.
Installers should only use Transair® components and accessories, in particular Transair® pipe clips and fixture clamps. The technical properties of the Transair® components, as described in the Transair® catalogue, must be respected.

Commissioning the Installation

Once the Transair® system has been installed and prior to commissioning, the installer should complete all tests, inspections and compliance checks as stated in any contract and according to sound engineering practice and current local regulations.

Transair® Pipe and Hoses

Transair® pipe should be protected from mechanical impact, particularly if exposed to potential collision with fork-lift trucks or when sited in an environment with moving overhead loads. Similarly, rotation of the pipe and pipe supports should be avoided. Transair® pipe must not be welded.

NB: For bending a Transair® stainless steel pipe, please refer to page 149 of this catalogue.

Component Assembly

Transair® components are provided with assembly instructions for their correct use - simply follow the methods and recommendations stated in this document or separate data sheets.

Transair® Installations - Prohibited Situations

- Installation within a solid mass (concrete, foam, etc.), especially underground
- The suspension of any external equipment from Transair® pipe
- The use of Transair® for earthing, or as a support for electrical equipment
- Exposure to chemicals that are incompatible with Transair® components (please contact us for further details).
- Use of components not approved by Transair®

Best Practices

When installing a Transair® system, work should be performed in accordance with good engineering practice.

Bends and bypasses represent sources of pressure drops.

Keep in-line pipe diameter reductions to a minimum.

The diameter of the pipe will influence pressure drop and the operation of point-of-use equipment.

Select the diameter according to the required flow rate and acceptable pressure drop at the point of use.

Never encase the network in a hard solid mass, in order to facilitate maintenance or servicing.

To insulate Transair® industrial water systems thermally, we recommend insulating the Transair® stainless steel pipes.

Position drops and feeds to take-off points as close as possible to the point of use.

TRANSAIR® STAINLESS STEEL PIPE

General

PRESENTATION

Transair® stainless steel pipe is supplied "ready for use". No particular preparation (cutting, deburring, chamfering, etc.) is required. Thanks to the rigidity of Transair® stainless steel pipe, temperature-related expansion / contraction phenomena are reduced to a minimum. The Transair® network retains its straightness, and hence its performance, over time (reduction of pressure drop caused by surface friction).Transair® stainless steel pipe is calibrated and fits perfectly onto all Transair® components. Each connection is automatically secured and sealing is, thus, optimized. The use of Transair® stainless steel pipe minimises corrosion.

PROCEDURE

Ø22: L = 30.4
Ø28: L = 41.5

1 - Cutting the pipe:
- place the pipe into the pipe cutter
- position the blade onto the pipe
- rotate the pipe cutter around the pipe while gently tightening the wheel.

2 - Carefully chamfer the outer edges
3 - Also deburr the interior end of the pipe
4 - Mark the connection indicator.

PROCEDURE

1 - PIPE SECTION

1 - Cutting the pipe:
- place the pipe into the pipe cutter
- position the blade onto the pipe
- rotate the pipe cutter around the pipe while gently tightening the wheel

2 - Carefully chamfer and deburr the end of the pipe with a file.

PROCEDURE

2 - PREPARATION OF THE PORTABLE TOOL KIT

Open the retaining pin at the front of the machine by pressing the jaw to release button*.

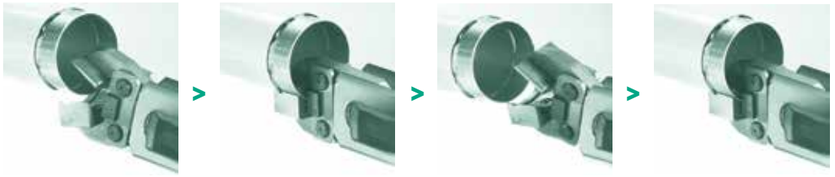

Place the jaws in the housing.

Lock in position by closing the retaining pin.

3 - HOW TO CREATE THE LUGS

Manually open the jaws of the clamp and insert the stainless steel pipe into the clamp as far as it will go.

Release the jaws. Press the trigger and crimp the tube until a 'snap' sound is heard.

Re-open the two jaws to remove the pipe and rotate the pipe slightly.

Renew the operation until the required minimum number of lugs for each diameter is achieved

Min. Number of Lugs	4	4	6	7

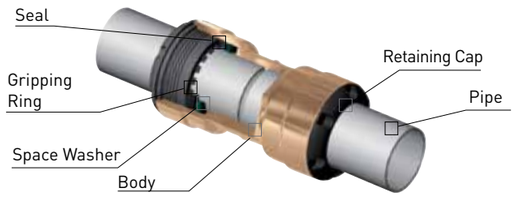

IMPORTANT: DO NOT OVERLOP THE LUGS!

TRANSAIR® CONNECTORS

General

Ø 22
Ø 28

INSTANT CONNECTION BY MEANS OF A GRIPPING RING

Pipe-to-pipe and stud connectors in Ø22 and Ø28 can be immediately connected to Transair® stainless steel pipe – simply push the pipe into the connector up to the connection mark. The gripping ring of each fitting is then automatically secured and the connection is safe.

Ø 42
Ø 60

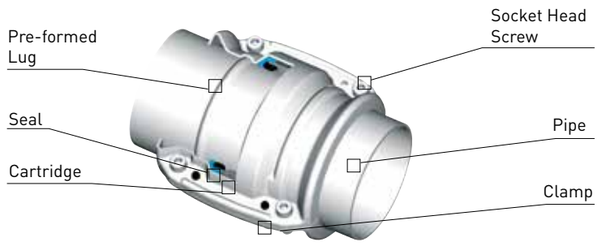

DOUBLE-CLAMP QUICK-FIT CONNECTION

Pipe-to-pipe and stud connectors in Ø42 and Ø60 can be quickly connected to Transair® stainless steel pipe by means of a double clamp ring. This secures the connection between the nut and the pipe – tightening of the nuts secures the final assembly.

Ø 76
Ø 100

CLAMP QUICK-FIT CONNECTION

Pipe-to-pipe and stud connectors in Ø76 and Ø100 can be quickly connected to Transair® stainless steel pipe.

Position the pipes to be connected within the Transair® cartridge and close/tighten the Transair® clamp.

60	128

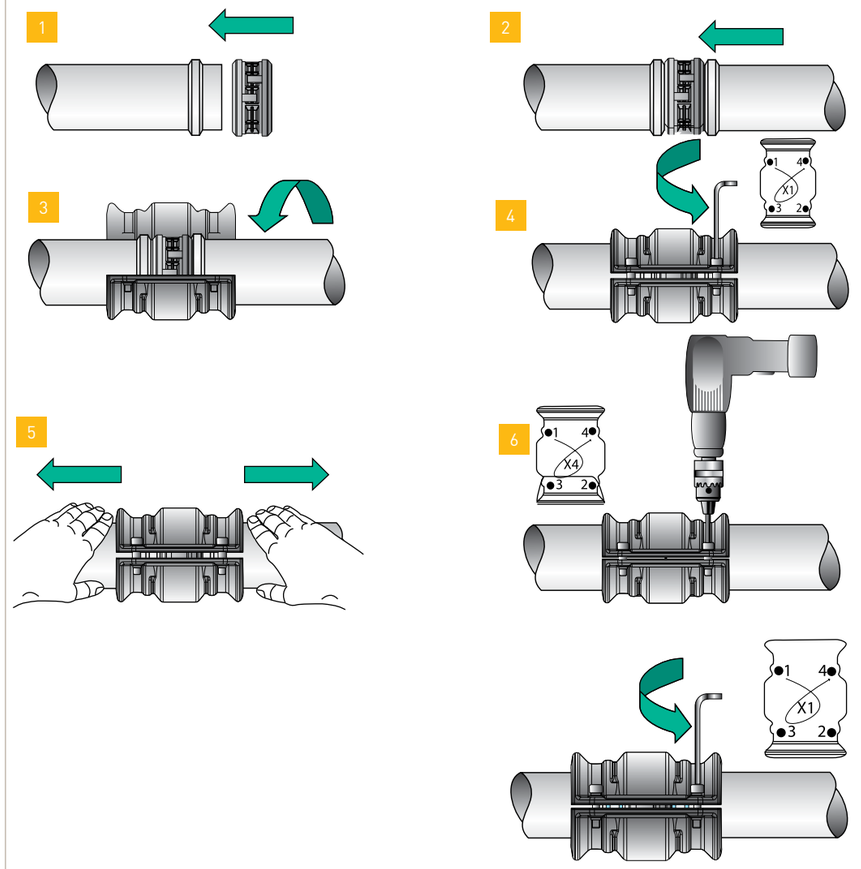

1 - Cut the pipe and create the lugs (cf pages 141)

2 - Connect the pipe

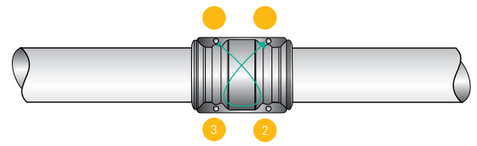

Connection / Disconnection

Ø 76
Ø 100

1 - Slip the cartridge over the end of the first pipe fully up to the shoulder.
2 - Bring the second pipe to the cartridge and slide fully up to the shoulder.
3 - Position the clamp over the cartridge / pipe assembly.
4 - Hand tighten the pre-fitted screws with a 6mm Allen key.
5 - Pull the pipes fully back towards the outside of the clamp.
6 - Tighten the clamp screws as follows:
- mini tightening torque: 10 N.m
- maxi tightening torque: make the 2 clamps touch together
7 - For effective clamp sealing, screw tighte ning should be performed on alternate sides of the clamp as shown above.

For effective clamp sealing, screw tightening should be performed on alternate sides of the clamp as shown below:

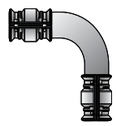

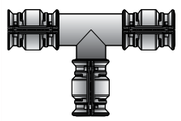

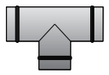

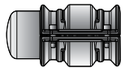

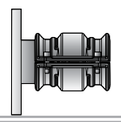

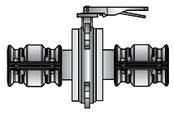

To disconnect, perform the same operations in reverse order.

TRANSAIR®: STAINLESS STEEL DROPS

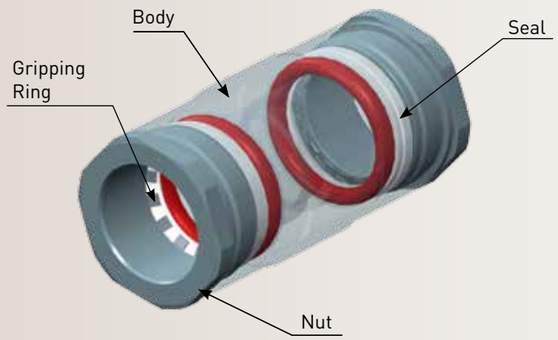

- To meet the requirements of compressed air and vacuum applications in **harsh environments** (food and beverage, pharmaceutical or laboratories), Transair® now proposes a complete range of **Ø22 mm 316L stainless steel drops**,
- These **modular drops with instant connection technology** are very easy to clean and are resistant to **aggressive** chemical agents (list of chemical compatibility available upon request).
- For food and beverage applications, these drops can be used in **food** or **splash zones** as they are compatible with permanent food contact (316L stainless steel complies with **FDA - CFR21 requirements** for food contact applications).

TECHNICAL SPECIFICATIONS

- Pipe external diameter: 22 mm
- Pipe internal diameter: 19.6 mm
- Full bore design
- Push-in technology
- Material (fitting and pipe): full stainless steel 316L
- Fittings individually packed in a plastic bag
- Sealing: FKM
- Pressure: 0 to 10 bar
- Temperature: - 20°C to + 120°C
- Vacuum: 10 mbar (absolute value)

ADVANTAGES AND BENEFITS

- Fully dismountable and reusable
- Instant connection and disconnection
- Modular and flexible networks
- Optimisation of cleaning and maintenance operations
- Large chemical compatibility for applications in aggressive chemical environments (See Chemical Compatibility Chart page 115)
- The 3-port wall bracket facilitates the connection to the process.

Example of an application in the Food & Beverage Industry: the user needed a full stainless steel 22mm drop in a wash down zone.

Instructions for Assembly and Disassembly of a Stainless Steel Drop

Assembly: simply push the pipe into the fitting.

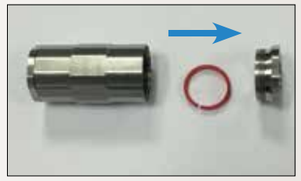

Disassembly: **1.** Manually unscrew the nut and slide the nut along the pipe.

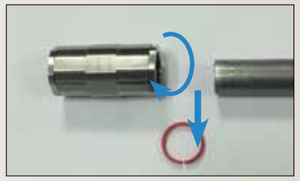

Disassembly : **2.** Put the red dismounting ring on the pipe and re-screw the nut on the fitting.

Disassembly : **3.** Pull the pipe from the fitting.

Disassembly : **4.** Manually unscrew the nut and remove the red dismounting ring.

Disassembly : **5.** Re-screw the nut on the fitting without the red ring; it is ready for assembly.

These drops can be connected to quick assembly brackets of Transair® aluminium range (pages 40/41 in this catalogue) and to quick assembly brackets of Transair® stainless steel range (page 129).

PARKER PRODUCTS FROM THE TECHNICAL ROOM

Coalescing and Activated Carbon Filters for Air and Compressed Gas

Flow rate up to 31.250 m3/h. Operating pressure up to 350 bar.
Designed for air and other compressed gases (natural gas, hydrogen, oxygen, nitrogen, argon, helium, etc.). Deliverables in accordance with the main international bodies (PED, ASME VIII div. 1 and 2, Ghost, China Stamp, LRofS, DNV, GL, ABS, etc.) including directives ISO12500 and ISO8573.1.

Refrigeration Dryers

- Flow up to 26 400 m^3/h.
- Operating pressure up to 40 bar.
- Pressure dew point +3 °C.
- Energy-saving system SMART SAVE.

Transair® System in Aluminium

Transair®: a unique, truly flexible and upgradeable aluminium pipe system.
Creating primary and secondary networks of the main industrial gases has never been quicker.
Compatible fluids: air, nitrogen, vacuum and argon, etc.
Diameters available: 16.5, 25, 40, 50, 63, 76, 100 and 168 mm.
Tube colours: blue, grey and green. Fittings: BSP and NPT.

Adsorption Dryers for Compressed Gases and Air

- Flow rate up to 14.500 m3/h. Operating pressure up to 350 bar. Pressure dew point to -70°C. Designed for air and other compressed gases.
- Patented vacuum regeneration system.
- Compliant with the requirements of main international standards and bodies (PED, ASME VIII div. 1 and 2, Ghost, China Stamp, LRofS, DNV, GL, ABS, etc.).

Membrane Dryers

- Designed for point of use applications where compact size is a determining factor.
- Flow rate of air up to 1.000 m3/h.
- Operating pressure up to 10 bar.
- Pressure dew point to -40°C.
- Operates without electrical supply.

Breathing Air Systems

- Flow rate up to 850 m3/h.
- Operating pressure up to 16 bar.
- Compliant with ISO 12021 and European Pharmacopoeia standards.

Heat Exchangers with Air and Liquid Cooling Systems

- Flow rate up to 12.000 m3/h.
- Designed for applications from 0 to 40 bar.
- Available in stainless steel and other materials resistant to chemical agents.
- Special ranges for biogas and natural gas.
- Bespoke installations according to requirements.

TO THE HEART OF PRODUCTION

Chillers for Industrial Cooling

- Refrigerating power up to 757 kW.
- Special external and internal surface treatments for aggressive gases and environments.
- Dedicated equipment for laser applications and special gases (biogas).
- Bespoke installations according to requirements.

Condensate Drains

- For compressed air lines up to 66.000 m3/h.
- Operating pressure up to 50 bar. Designed for corrosive gases and air.
- Float, time delay and electronic level control versions.

Transair® System in Stainless Steel

Transair®: a flexible and upgradeable stainless steel pipe system
for creating primary and secondary industrial water networks.
Compatible fluids: industrial water, oils, etc.
Main application: cooling (moulds, tools, welding, etc.)
Diameters available: 22, 28, 42, 60, 76 and 100 mm.
Fittings: BSP and NPT.

Water-Oil Condensate Separators

Available in 7 models for the treatment of condensates generated by compressed air for flow rates up to 3.600 m3/h.

Nitrogen Generators for Industrial and Laboratory Applications.

- To generate ultra-pure nitrogen from compressed air.
- Flow rate of nitrogen produced up to 150 m3/h.
- Modular assembly for larger nitrogen flow rates.
- Degree of purity: from 95% to 99.999%.
- Maximum pressure of incoming air: 15.0 bar.
- Maximum pressure of outgoing nitrogen: 13.5 bar.
- Compliant with EIGA standard relating to the food and drink industry

Nitrogen Membrane Generators

- To generate ultra-pure nitrogen from compressed air.
- Flow rate of nitrogen produced up to 300 m3/h.
- Modular assembly for larger nitrogen flow rates.
- Degree of purity: from 95% to 99.5%.
- Maximum pressure of outgoing nitrogen: 13 bar.
- Reduced compressed air consumption per m3 of nitrogen produced.
- Designed for point-of-use applications.

Added Value Services

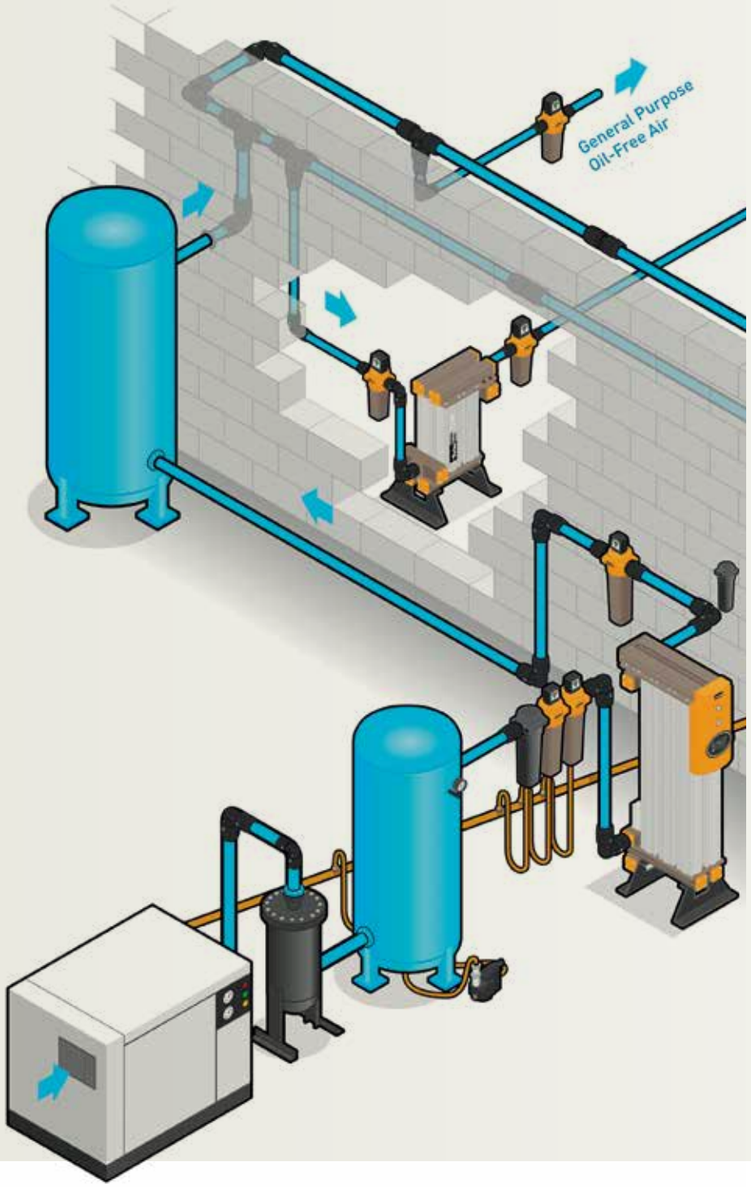

- Contaminant analysis.
- Particle counting
- Humidity testing.
- Breathing air analysis.
- Leak testing.
- Service packages.
- Factory trained technicians.
